Structural evaluation can be very useful at the network level for project prioritization purposes In the project priority ranking procedure of the Kansas Department of Transportation KDOT a pavement rating attribute Pavement Structural Evaluation PSE is used These ratings are subjective his study outlines an approach based on the classical multiple regression analysis resulting in a better estimation of the PSE values using the results from the Falling Weight Deflectometer FWD tests and network level distress survey The regression models proposed in this study predict the decrease in PSE values by taking into account the FWD data age thickness and distress levels of pavements and very closely approximate the current PSE ratings obtained at the district level **Proceedings [of the Conference]** Australian Road Research Board, 1996 **Road & Transport Research** ,1998
