Algebraic and Analytic Aspects of Integrable Systems and Painlevé Equations Anton Dzhamay, Kenichi Maruno, Christopher M. Ormerod, 2015-10-28 This volume contains the proceedings of the AMS Special Session on Algebraic and Analytic Aspects of Integrable Systems and Painlevé Equations held on January 18 2014 at the Joint Mathematics Meetings in Baltimore MD The theory of integrable systems has been at the forefront of some of the most important developments in mathematical physics in the last 50 years The techniques to study such systems have solid foundations in algebraic geometry differential geometry and group representation theory Many important special solutions of continuous and discrete integrable systems can be written in terms of special functions such as hypergeometric and basic hypergeometric functions The analytic tools developed to study integrable systems have numerous applications in random matrix theory statistical mechanics and quantum gravity One of the most exciting recent developments has been the emergence of good and interesting discrete and quantum analogues of classical integrable differential equations such as the Painlevé equations and soliton equations Many algebraic and analytic ideas developed in the continuous case generalize in a beautifully natural manner to discrete integrable systems The editors have sought to bring together a collection of expository and research articles that represent a good cross section of ideas and methods in these active areas of research within integrable systems and their applications

Integrable Systems on Lie Algebras and Symmetric Spaces A. T. Fomenko, V. V. Trofimov, 1988 Second volume in the series translated from the Russian sets out new regular methods for realizing Hamilton's canonical equations in Lie algebras and symmetric spaces Begins by constructing the algebraic embeddings in Lie algebras of Hamiltonian systems going on to present effective methods for constructing complete sets of functions in involution on orbits of coadjoint representations of Lie groups Ends with the proof of the full integrability of a wide range of many parameter families of Hamiltonian systems that allow algebraicization Annotation copyrighted by Book News Inc Portland OR

Mathematics: Topics in the geometric theory of integrable mechanical systems Robert Hermann, 1973

Geometric and Algebraic Structures in Differential Equations P.H. Kersten, 1995-11-30 The geometrical theory of nonlinear differential equations originates from classical works by S Lie and A B cklund It obtained a new impulse in the sixties when the complete integrability of the Korteweg de Vries equation was found and it became clear that some basic and quite general geometrical and algebraic structures govern this property of integrability Nowadays the geometrical and algebraic approach to partial differential equations constitutes a special branch of modern mathematics In 1993 a workshop on algebra and geometry of differential equations took place at the University of Twente The Netherlands where the state of the art of the main problems was fixed This book contains a collection of invited lectures presented at this workshop The material presented is of interest to those who work in pure and applied mathematics and especially in mathematical physics

Dirac Structures and Integrability of Nonlinear Evolution Equations Irene Dorfman, 1993-06-22 An introduction to the area for non specialists with an original approach to the mathematical basis of one of the hottest research topics in nonlinear science Deals with specific aspects of Hamiltonian theory of systems with finite or infinite dimensional phase spaces Emphasizes systems which occur in soliton theory Outlines current work in the Hamiltonian theory of evolution equations

Secondary Calculus and Cohomological Physics Marc Henneaux, 1998 This collection of invited lectures at the Conference on Secondary Calculus and Cohomological Physics Moscow 1997 reflects the state of the art in a new branch of mathematics and mathematical physics arising at the intersection of geometry of nonlinear differential equations quantum field theory and cohomological algebra This is the first comprehensive and self contained book on modern quantum field theory in the context of cohomological methods and the geometry of nonlinear PDEs **Integrable Systems, Topology, and Physics** Martin A. Guest, Reiko Miyaoka, Yoshihiro Ohnita, 2002 Ideas and techniques from the theory of integrable systems are playing an increasingly important role in geometry Thanks to the development of tools from Lie theory algebraic geometry symplectic geometry and topology classical problems are investigated more systematically New problems are also arising in mathematical physics A major international conference was held at the University of Tokyo in July 2000 It brought together scientists in all of the areas influenced by integrable systems This book is the second of three collections of expository and research articles This volume focuses on topology and physics The role of zero curvature equations outside of the traditional context of differential geometry has been recognized relatively recently but it has been an extraordinarily productive one and most of the articles in this volume make some reference to it Symplectic geometry Floer homology twistor theory quantum cohomology and the structure of special equations of mathematical physics such as the Toda field

equations all of these areas have gained from the integrable systems point of view and contributed to it Many of the articles in this volume are written by prominent researchers and will serve as introductions to the topics It is intended for graduate students and researchers interested in integrable systems and their relations to differential geometry topology algebraic geometry and physics The first volume from this conference also available from the AMS is Differential Geometry and Integrable Systems Volume 308 CONM 308 in the Contemporary Mathematics series The forthcoming third volume will be published by the Mathematical Society of Japan and will be available outside of Japan from the AMS in the Advanced Studies in Pure Mathematics series

Nonlinear and Modern Mathematical Physics Wen Xiu Ma,Xing-biao Hu,Qingping Liu,2010-03-26 The volume is very beneficial to both starting and experienced researchers working in the field of integrable nonlinear equations soliton theory and nonlinear waves It will be an excellent reference book for graduate students majoring in mathematical physics and engineering sciences This volume covers a broad range of current interesting topics in nonlinear and modern mathematical physics and reviews recent developments in integrable systems soliton theory and nonlinear dynamics The book is suitable for both starting and experienced researchers working in nonlinear sciences and it is a good reference for students of mathematical physical and engineering sciences
