Snobol Programming for the Humanities Susan M. Hockey, 1985. This book is an introduction to computer programming for non scientific applications using SNOBOL, a computer language that runs on both mainframe and microcomputers and is particularly suitable for use in the humanities. Eight chapters cover all relevant aspects of SNOBOL and each contains example programs and a set of exercises. Chapter 9 introduces SPITBOL, a commonly used superset of SNOBOL. The book ends with some hints on how to detect errors in the language and some suggested applications for SNOBOL on microcomputers as well as mainframes. Developed from a programming course given by the author at Oxford, this book should appeal to researchers in the humanities as well as to students.

The Humanities Computing Yearbook 1989-1990 Ian Lancashire, 1991. This is the second in a series of comprehensive annual reference guides to the use of computers in all the disciplines of the humanities. Like its predecessor, this volume provides a taxonomy of the field and an annotated survey of publications, research centers, text archives and termbanks, electronic communications software and hardware relevant to the humanities. It also includes special larger entries for important software that offer up to date information and practical help in applying that information to research projects and instruction in colleges and universities. For the 1989-1990 edition, Lancashire has for the first time appointed an international advisory board of specialists to assist in discovering, assembling and evaluating materials for inclusion and to keep up with the rapidly developing nature of the field and its international constituency. Lancashire has included many completely new or revised sections, including a major new chapter on computing in Law. A monumental work of current and enduring value. The Humanities Computing Yearbook will prove invaluable to a wide range of students, teachers and researchers in humanities and social sciences, computational linguistics and related fields in computer science.
