Accounts of the seventeenth century Jesuit Mission to China have often celebrated it as the great encounter of two civilizations. The Jesuits portrayed themselves as wise men from the West who used mathematics and science in service of their mission. Chinese literati official Xu Guangqi 1562 1633 who collaborated with the Italian Jesuit Matteo Ricci 1552 1610 to translate Euclid's Elements into Chinese reportedly recognized the superiority of Western mathematics and science and converted to Christianity. Most narratives relegate Xu and the Chinese to subsidiary roles as the Jesuits translators followers and converts. Imagined Civilizations tells the story from the Chinese point of view. Using Chinese primary sources Roger Hart focuses in particular on Xu who was in a position of considerable power over Ricci. The result is a perspective startlingly different from that found in previous studies. Hart analyzes Chinese mathematical treatises of the period revealing that Xu and his collaborators could not have believed their

declaration of the superiority of Western mathematics Imagined Civilizations explains how Xu's West served as a crucial resource. While the Jesuits claimed Xu as a convert, he presented the Jesuits as men from afar who had traveled from the West to China to serve the emperor. **Evolutionary Computation** Ashish M. Gujarathi, B. V. Babu, 2016-12-01. Edited by professionals with years of experience, this book provides an introduction to the theory of evolutionary algorithms and single and multi objective optimization, and then goes on to discuss and explore applications of evolutionary algorithms for many uses with real world applications. Covering both the theory and applications of evolutionary computation, the book offers exhaustive coverage of several topics on nontraditional evolutionary techniques, details working principles of new and popular evolutionary algorithms, and discusses case studies on both scientific and real world applications of optimization.

Flood Forecasting Using Machine Learning Methods Fi-John Chang, Kuolin Hsu, Li-Chiu Chang, 2019-02-28

Nowadays the degree and scale of flood hazards has been massively increasing as a result of the changing climate and large scale floods jeopardize lives and properties, causing great economic losses in the inundation-prone areas of the world. Early flood warning systems are promising countermeasures against flood hazards and losses. A collaborative assessment according to multiple disciplines comprising hydrology, remote sensing, and meteorology of the magnitude and impacts of flood hazards on inundation areas significantly contributes to model the integrity and precision of flood forecasting. Methodologically oriented countermeasures against flood hazards may involve the forecasting of reservoir inflows, river flows, tropical cyclone tracks, and flooding at different lead times and/or scales. Analyses of impacts, risks, uncertainty, resilience, and scenarios coupled with policy-oriented suggestions will give information for flood hazard mitigation. Emerging advances in computing technologies coupled with big data mining have boosted data-driven applications among which Machine Learning technology, with its flexibility and scalability in pattern extraction, has modernized not only scientific thinking but also predictive applications. This book explores recent Machine Learning advances on flood forecast and management in a timely manner and presents interdisciplinary approaches to modelling the complexity of flood hazards related issues with contributions to integrative solutions from a local, regional, or global perspective. **Chinese Journal of Electronics**, 2008.
