Christian, 2020-10-06 Finalist for the Los Angeles Times Book Prize A jaw dropping exploration of everything that goes wrong when we build AI systems and the movement to fix them Today's machine learning systems trained by data are so effective that we've invited them to see and hear for us and to make decisions on our behalf But alarm bells are ringing Recent years have seen an eruption of concern as the field of machine learning advances When the systems we attempt to teach will not in the end do what we want or what we expect ethical and potentially existential risks emerge Researchers call this the alignment problem Systems culled until years later we discover that they have inherent gender biases Algorithms decide bail and parole and appear to assess Black and White defendants differently We can no longer assume that our mortgage application or even our medical tests will be seen by human eyes And as autonomous vehicles share our streets we are increasingly putting our lives in their hands The mathematical and computational models driving these changes range in complexity from something that can fit on a spreadsheet to a complex system that might credibly be called artificial intelligence They are steadily replacing both human judgment and explicitly programmed software In best selling author Brian Christian's riveting account we meet the alignment problem's first responders and learn their ambitious plan to solve it before our hands are completely off the wheel In a masterful blend of history and on the ground reporting Christian traces the explosive growth in the field of machine learning and surveys its current sprawling frontier Readers encounter a discipline finding its legs amid exhilarating and sometimes terrifying progress Whether they and we succeed or fail in solving the alignment problem will be a defining human story The Alignment Problem offers an unflinching reckoning with humanity's biases and blind spots our own unstated assumptions and often contradictory goals A dazzlingly interdisciplinary work it takes a hard look not only at our technology but at our culture and finds a story by turns harrowing and hopeful

Students work with algorithms from the start and apply these ideas to real problems that computers can help solve The benefit of this approach is that students will understand the power of computers as problem solving tools learn to think like programmers and gain an appreciation of the computer science discipline      *Psychopharmacotherapy for the Elderly*
