Software Composition Cesare Pautasso, Éric Tanter, 2008-03-17 The goal of the International Symposia on Software Composition is to advance the state of the research in component based software development. We focus on the challenges related to component development reuse verification and of course composition.

Software composition is becoming more and more important as innovation in software engineering shifts from the development of individual components to their reuse and recombination in novel ways. To this end for the 2008 edition researchers were solicited to contribute on topics related to component adaptation techniques, composition languages, calculi and type systems as well as emerging composition techniques such as aspect oriented programming, service oriented architectures and mashups. In line with previous editions of SC contributions were sought focusing on both theory and practice with a particular interest in efforts relating them. This LNCS volume contains the proceedings of the 7th International Symposium on Software Composition which was held on March 29-30 2008 as a satellite event of the European Joint Conferences on Theory and Practice of Software (ETAPS) in Budapest, Hungary. We received 90 initial submissions from all over the world out of which 70 were considered for evaluation by a Program Committee consisting of 30 international experts. Among these submissions we selected 13 long papers and 6 short papers to be included in the proceedings and presented at the conference. Each paper went through a thorough revision process and was reviewed by three to five reviewers. This ensured the necessary quality for publishing these proceedings in time for the event a first in the history of the symposium.
