## **Building Responsive Data Visualization For The Web:**

Building Responsive Data Visualization for the Web Bill Hinderman, 2015-11-02 Unchain your data from the desktop with responsive visualizations Building Responsive Data Visualization for the Web is a handbook for any front end development team needing a framework for integrating responsive web design into the current workflow Written by a leading industry expert and design lead at Starbase Go this book provides a wealth of information and practical guidance from the perspective of a real world designer You ll walk through the process of building data visualizations responsively as you learn best practices that build upon responsive web design principles and get the hands on practice you need with exercises examples and source code provided in every chapter These strategies are designed to be implemented by teams large and small with varying skill sets so you can apply these concepts and skills to your project right away Responsive web design is the practice of building a website to suit base browser capability then adding features that enhance the experience based on the user s device s capabilities Applying these ideas to data produces visualizations that always look as if they were designed specifically for the device through which they are viewed This book shows you how to incorporate these principles into your current practices with highly practical hands on training Examine the hard data surrounding responsive design Master best practices with hands on exercises Learn data based document manipulation using D3 js Adapt your current strategies to responsive workflows Data is growing exponentially and the need to visualize it in any context has become crucial Traditional visualizations allow important data to become lost when viewed on a small screen and the web traffic speaks for itself viewers repeatedly demonstrate their preference for responsive design If you re ready to create more accessible take anywhere visualizations Building Responsive Data Visualization for the Web is your tailor made solution **Learning**

**Responsive Data Visualization** Christoph Korner, 2016-03-23 Master the art of building responsive visualizations on the Web About This Book Learn the techniques for building data visualizations that work well for all screen sizes Implement responsive techniques with popular libraries to get to grips with building responsive visualizations that work in the real world Incorporate responsive workflow in your data visualization process to build visualizations that take a mobile first approach Who This Book Is For Web developers and data science professionals who want to make their visualizations work for smaller screen sizes Some basic knowledge of JavaScript and Data visualization is expected What You Will Learn Get familiar with responsive design for data visualizations Understand the main concepts of D3 js to create interactive visualizations Unleash the power of Bootstrap to create stunning and responsive visualizations for all screen resolutions Implement Touch and Mouse interactions for mobile first applications Design Transitions and Animations that impress in portrait and landscape Build a Responsive World Map using GeoJSON and D3 js In Detail Using D3 js and Responsive Design principles you will not just be able to implement visualizations that look and feel awesome across all devices and screen resolutions but you will also boost your productivity and reduce development time by making use of Bootstrap the most

popular framework for developing responsive web applications This book teaches the basics of scalable vector graphics SVG D3.js and Bootstrap while focusing on Responsive Design as well as mobile first visualizations the reader will start by discovering Bootstrap and how it can be used for creating responsive applications and then implement a basic bar chart in D3.js You will learn about loading parsing and filtering data in JavaScript and then dive into creating a responsive visualization by using Media Queries responsive interactions for Mobile and Desktop devices and transitions to bring the visualization to life In the following chapters we build a fully responsive interactive map to display geographic data using GeoJSON and set up integration testing with Protractor to test the application across real devices using a mobile API gateway such as AWS Device Farm You will finish the journey by discovering the caveats of mobile first applications and learn how to master cross browser complications Style and approach As the world shifts to mobile devices for consuming data on the Web developers are faced with the unique challenge of making data visualizations work for their smaller screens The growth of responsive web design enabled developers to adopt page layouts and media for smaller screens but there is still little information available on how to adapt data visualizations for the smaller screens This book fills this important gap and shows how responsive web design principles can be extended to create visualizations that work well regardless of the screen size thereby allowing developers to build user friendly visualizations that work well on all devices In addition to covering some of the popular techniques and design patterns for building responsive visualizations the book also shows readers how to implement these techniques with the help of some popular tools and libraries

**Visualizations with D3.js** Merrill Cook, 2015 This video course starts out by describing ways in which D3.js fits into existing web standards to provide data visualization solutions that can be easily integrated After working through the basic flow of simple visualizations we'll start adding features tool tips axes and scales We'll take a look at interactivity and transitions Then we'll walk through the use of external data sources including CSV TSV JSON and GeoJSON which will prepare us for more in depth visualizations Further on we'll tackle responsive design covering all the basic concepts and then work our way through a site mockup the old fashioned way looking for breakpoints and using media queries to provide smooth screen size transitions Our work with responsive design will then be applied to a number of our early data visualizations We'll resume our focus on responsive design later in the course when we'll cover using Bootstrap and Pym.js a JavaScript library that enables the embedding of responsive iFrames The data visualizations we'll tackle in the final sections of the course will include mapping with Topo and GeoJSON By the end of this course you will have an armory full of tools to create feature rich data visualizations with D3.js that are responsive on different platforms Resource description page *Learn Chart.js* Helder da Rocha, 2019-02-28 Design interactive graphics and visuals for your data driven applications using the popular open source Chart.js data visualization library Key Features Harness the power of JavaScript HTML and CSS to create interactive visualizations Display quantitative information efficiently in the form of attractive charts by using Chart.js A practical guide

for creating data driven applications using open source JavaScript library

**Book Description** Chart.js is a free open source data visualization library maintained by an active community of developers in GitHub where it rates as the second most popular data visualization library. If you want to quickly create responsive Web based data visualizations for the Web, Chart.js is a great choice. This book guides the reader through dozens of practical examples complete with code you can run and modify as you wish. It is a practical hands on introduction to Chart.js. If you have basic knowledge of HTML, CSS, and JavaScript, you can learn to create beautiful interactive Web Canvas based visualizations for your data using Chart.js. This book will help you set up Chart.js in a Web page and show how to create each one of the eight Chart.js chart types. You will also learn how to configure most properties that override Chart.js's default styles and behaviors. Practical applications of Chart.js are exemplified using real data files obtained from public data portals. You will learn how to load, parse, filter, and select the data you wish to display from those files. You will also learn how to create visualizations that reveal patterns in the data. This book is based on Chart.js version 2.7.3 and ES2015 JavaScript. By the end of the book, you will be able to create beautiful, efficient, and interactive data visualizations for the Web using Chart.js.

**What you will learn**
