

## **Evolution of Social Behavior: Individual and Group Selection**

**Theodore C. Bergstrom**

*"A selector of sufficient knowledge and power might perhaps obtain from the genes at present available in the human species a race combining an average intellect equal to that of Shakespeare with the stature of Carneva. But he could not produce a race of angels. For the moral character or for the wings he would have to await or produce suitable mutations."*

—J.B.S. Haldane (1932, p. 110)

**W**hat can our evolutionary history tell us about human motivations and social behavior? The genes that influence our own behavior are copies of copies of copies of genes that have guided our ancestors to survive and to reproduce. If selfish behavior leads to reproductive success, then we should expect our genes to impel us toward selfishness. Thus, Richard Dawkins (1976, pp. 2–4) observed:

If we were told that a man lived a long and prosperous life in the world of Chicago gangsters, we would be entitled to make some guesses as to the sort of man he was . . . . Like successful Chicago gangsters, our genes have survived, in some cases for millions of years, in a highly competitive world . . . . If you look at the way natural selection works, it seems to follow that anything that has evolved by natural selection should be selfish.

Sir Alexander Carr-Saunders (1922), a sociologist who pioneered studies of demography and social evolution, took an opposing view. Carr-Saunders maintained that evidence from primitive cultures suggests that prehistoric humans clustered into groups that inhabited well-defined areas between which migration

**Reproductive Ecology of Flowering Plants: A Manual** K.R. Shivanna, Rajesh Tandon, 2014-09-01 Successful reproduction is the basis not only for the stability of the species in their natural habitat but also for productivity of our crop plants Therefore knowledge on reproductive ecology of wild and cultivated plants is important for effective management of our dwindling biodiversity and for the sustainability and improvement of the yield in crop species Conservation and management of our plant diversity is going to be a major challenge in the coming decades particularly in the tropical countries which are rich in biodiversity Reproductive failure is the main driver for pushing a large number of tropical species to vulnerable category Available data on reproductive ecology on tropical species is very limited and there is an urgent need to initiate research on these lines A major limitation for the beginners to take up research is the absence of simple concise work manuals that provide step wise procedures to study all aspects of reproductive ecology The Manual fills this void Over 60 protocols described in the manual cover the whole spectrum of reproductive ecology study sites and species phenology floral morphology and sexuality pollen and pistil biology pollination ecology breeding system seed biology seed dispersal and seedling recruitment Each chapter gives a concise conceptual account of the topic before describing the protocols The Manual caters to researchers teachers and students who are interested in any aspect of reproductive ecology of flowering plants botanists ecologists agri horticulturists foresters entomologists plant breeders and conservation biologists
