**A320** Airbus Industrie,1987    **Airbus A380 Owner's Workshop Manual** Robert Wicks,2017-11-07 The Airbus A380 is the world's most recognised and most talked about airliner since the Boeing 747 and Concorde appeared in the skies in the late 1960s. Designed to challenge Boeing's monopoly in the large aircraft market it made its first flight in April 2005 entering commercial service two years later with Singapore Airlines. This jet has become so popular that every four minutes 24 hours a day seven days a week an A380 is taking off or landing somewhere in the world. There is no other development in recent aviation history to rival this remarkable aircraft

**Fibre Metal Laminates** Ad Vlot,Jan Willem Gunnink,2001-11-30 Fibre metal laminates were developed at Delft University of Technology in The Netherlands from the beginning of the 1980s. This is a new family of hybrid materials consisting of thin metal layers bonded together by fibres embedded in an adhesive. As a result of this build up fibre metal laminates possess a mixture of the characteristics of both metals and composite materials. Initial development led to the Arall variant using aramid fibres which was first applied on the C 17 military transport aircraft around 1990. Large scale application became possible with a variant using glass fibres dubbed Glare which was selected for the Airbus A380 super jumbo in 2001. This is the first book to discuss these new materials and it deals mostly with Glare. It covers most of the relevant aspects of the materials from static mechanical properties fatigue and impact to design, production and maintenance of aircraft structures. This book contains the basic information on these new materials necessary for engineers and aircraft operators alike

### **Development of Probabilistic Design Methodology for Composite Structures**

P. M. Gary, 1997 This program was conducted by Vought Aircraft Company Dallas Texas to perform technical studies to aid in the development of a probabilistic design methodology The foundation of the probabilistic design approach applied to composite structure is to base design criteria and objectives on reliability targets instead of factors of safety Control of the process in terms of how much it differs from the traditional approach is maintained by the Probability of Structural Failure The key technical issues addressed in this contract were the overall assessment of the accuracy of the methodology current reliability experience definition of appropriate goals and database development The overall assessment of the accuracy of the methodology was done by reviewing current published documents and papers in the probabilistic design field This review focused on similarities and differences between approaches The database development was done by visiting airline maintenance depots and naval aviation depots to collect data on structural failures The analyses of such data produced historical values for aircraft structural reliability Current structural reliability issues and reliability goals were addressed by analyzing the wing box of the Lear Fan aircraft using Vought s Probabilistic Design Model Measures of structural reliability such as single flight hour probability of failure for the whole wing box including upper skin lower skin and substructure were produced
