**Aircraft and Submarines** Willis J. Abbot, 2018-11-14 Excerpt Not since gunpowder was first employed in warfare has so revolutionary a contribution to the science of slaughtering men been made as by the perfection of aircraft and submarines. The former have had their first employment in this world wide war of the nations. The latter though in the experimental stage as far back as the American Revolution have in this bitter contest been for the first time brought to so practical a stage of development as to exert a really appreciable influence on the outcome of the struggle. *Aircraft and Submarines* Willis John Abbot, 1918. [Aircraft and Submarines: The Story of the Invention, Development, and Present-Day Uses of War's Newest Weapons](#) Willis John Abbot, 2020-09-28. [Aircraft and Submarines The Story of the Invention, Development, and Present-Day Uses of War's Newest Weapons](#) Willis John Abbot, 2009. **Submarine Aircraft Carriers** Jacob Gunnarson, Norman Polmar, 2025-12-16 Two innovations in weaponry appeared at the beginning of the twentieth century and revolutionized warfare turning it into a multidimensional contest: the modern diesel powered submarine and the fixed wing aircraft. Both saw extensive use during World War I and the nations of the world soon developed mobile launching pads for planes during and after the war first using surface ships and then submarines. The submarine aircraft carrier was born. Virtually nothing has been written about these weapons until now in this detailed narrative by one of the world's leading naval experts. Submarine aircraft carriers were pursued by all of the world's major naval powers: the United States, Great Britain, Germany, France, Italy, Japan, and the Soviet Union. Germany led the way and while its efforts did not put vessels into battle during World War I, rumors of such a submarine caused widespread panic in New York City in 1918. Despite concentrated efforts during the 1920s and 1930s, only Japan and France had seagoing submarine aircraft carriers when World War II erupted. France's single such vessel disappeared at sea in 1942, but Japan built forty-seven, including three of its massive I-400 class, the largest submarines of World War II. Japanese submarine aircraft carriers launched the only aerial bombing of the contiguous United States when a sub-based plane dropped bombs over Oregon. The three I-400s figured prominently in Japan's never realized plans to attack the Panama Canal, New York City, and Washington DC, as well as in Operation Cherry Blossoms at Night, Japan's last ditch plan to spread bubonic plague and other pathogens to the coastal cities of California. After World War II, both the United States and the Soviet Union pursued further development of submarine aircraft carriers as part of their nuclear strike capabilities, including some fanciful ideas for truly gigantic submarines launching bomber aircraft, but the advent of guided cruise missiles quickly ended interest in these vessels. In this comprehensive and readable history, Jacob Gunnarson and Norman Polmar draw on more than sixty years of researching and writing about the world's naval vessels to uncover the development of submarine aircraft carriers. Their story reveals much about twentieth century naval strategy, tactics, and technology. [USN Submarine vs IJN Aircraft Carrier](#) Mark Lardas, 2025-01-16 Fully illustrated, this book pits US Navy submarines against the aircraft carriers of the Imperial Japanese

Navy at the height of World War II Before World War II the world's navies envisioned the submarine as a tool to hunt and kill cruisers and capital ships aircraft carriers and battleships Instead they became best known for their abilities as commerce raiders Yet hunting capital ships remained an important auxiliary role for the US submarine force in World War II Featuring specially commissioned artwork and mapping alongside carefully chosen archive illustrations this absorbing study focuses on five revealing battles between US submarines and Japanese aircraft carriers during 1942-44 At first a combination of factors bad torpedoes poor US tactics and plain bad luck foiled every US submarine attack on a Japanese capital ship in 1942 and 1943 But over the space of six months in 1944 from June through November of that year US submarines sank three of Japan's largest aircraft carriers as well as a battleship Thereafter Japanese capital ships clung to port or sheltered waters beyond the reach of submarines In this book Mark Lardas explains how the technologies and procedures employed by both sides helped to determine the victor in five revealing clashes from the battle of Midway in June 1942 to the sinking of Shinano the largest warship sunk by a submarine in November 1944

**Aircraft and Submarines the Story of the Invention, Development, and Present-Day Uses of War's Newest Weapons** Willis John Abbot, 2018-08-15 Aircraft and Submarines The Story of the Invention Development and Present Day Uses of War's Newest Weapons Large Print Willis John Abbot INTRODUCTION It was at Mons in the third week of the Great War The grey green German hordes had overwhelmed the greater part of Belgium and were sweeping down into France whose people and military establishment were all unprepared for attack from that quarter For days the little British army of perhaps 100 000 men that forlorn hope which the Germans scornfully called contemptible but which man for man probably numbered more veteran fighters than any similar unit on either side had been stoutly holding back the enemy's right wing and fighting for the delay that alone could save Paris At Mons they had halted hoping that here was the spot to administer to von Kluck beating upon their front the final check The hope was futile Looking back upon the day with knowledge of what General French's army faced a knowledge largely denied to him it seems that the British escape from annihilation was miraculous And indeed it was due to a modern miracle the conquest of the air by man in the development of the airplane We are delighted to publish this classic book as part of our extensive Classic Library collection Many of the books in our collection have been out of print for decades and therefore have not been accessible to the general public The aim of our publishing program is to facilitate rapid access to this vast reservoir of literature and our view is that this is a significant literary work which deserves to be brought back into print after many decades The contents of the vast majority of titles in the Classic Library have been scanned from the original works To ensure a high quality product each title has been meticulously hand curated by our staff Our philosophy has been guided by a desire to provide the reader with a book that is as close as possible to ownership of the original work We hope that you will enjoy this wonderful classic work and that for you it becomes an enriching experience

Abbot,2010-04 War from the air war from beneath the waves For thousands of years warfare had been the business of armies of foot and horse soldiers whilst the seas and oceans were contested by the collision of navies propelled by wind sail and oars The industrial age of the mid nineteenth century brought in a new era where technology would find its way into every aspect of the life of mankind Predictably that did not exclude the business of killing In the development of the aircraft and the submarine new hitherto impossible dimensions were attained and their influence removed the limitations of warfare confined only to the surface of our planet This excellent and substantial book charts the development and wartime proving of submarines and aircraft in the most

detailed way up to and including in some detail their operational use during the First World War This account includes many diagrams illustrations and photographs which are sure to captivate anyone interested in the Great War of the machines

bases in Flanders conducted area and hunting patrols around the coasts of Britain and escorted merchant convoys to safety. Despite the fact that aircraft acting alone destroyed only one U boat during the war, the overall contribution of naval aviation to foiling U boat attacks was significant. Only five merchant vessels succumbed to submarine attack when convoyed by a combined air and surface escort during World War I. This book examines aircraft and weapons technology, aircrew training, and the aircraft production issues that shaped this campaign. Then a close examination of anti submarine operations, bombing patrols, and escort yields a significantly different judgment from existing interpretations of these operations. This study is the first to take an objective look at the writing and publication of the naval and air official histories as they told the story of naval aviation during the Great War. The author also examines the German view of aircraft effectiveness through German actions, prisoner interrogations, official histories, and memoirs to provide a comparative judgment. The conclusion closes with a brief narrative of post war air anti submarine developments and a summary of findings. Overall, the author concludes that despite the challenges of organization, training, and production, the employment of aircraft against U boats was largely successful during the Great War. This book will be of interest to historians of naval and air power history as well as students of World War I and military history in general.
