Aids Taking A Long Term View Ft Press Science:

The Political Economy of HIV in Africa Deborah Johnston, Kevin Deane, Matteo Rizzo, 2018-10-18 Biomedical revolutions seem to have radically altered the environment for HIV transmission anti retrovirals ARVs and drugs to reduce mother to child transmission promise to cut HIV transmission rates as does male medical circumcision. However the hopeful messages of UNAIDS are tempered with warning about expenditure shortfalls and calls for funding. Contributions to this book remind us that along with the external financial constraints there have been new fractures in state power and in the organisation of health systems. More than this the book fundamentally calls into question whether biomedical interventions can change the social roots of this disease. As well as considering new policy approaches the book reasserts a long standing political economy approach to HIV and to adapt it to reflect new competing theoretical approaches. The chapters attempt to connect the debates about HIV AIDS to larger discussions about globalisation, class differentiation, inequity and uneven development in African countries. This book was originally published as a special issue of *Review of African Political Economy*.

Thinking Politically about HIV Kent Buse, Dennis Altman, 2016-04-08 AIDS has a unique political history. As fears grew of a global pandemic on the scale of AIDS in sub Saharan Africa AIDS was briefly treated as an issue of high politics in the international arena and generated significant resources for country programmes. That initial commitment is now declining and if AIDS is to maintain its visibility and contribution to global solidarity, human rights and dignity its politics will have to evolve to reflect the profound geo political, economic and social transformations underway today. This volume brings together leading scholars from a variety of disciplines who work at the intersection of politics and HIV. They reflect on the lessons learned from the past thirty years of the politics of AIDS and how political science writ large can further contribute to the understanding and practice of political mobilization around AIDS. Through case studies and analysis new insights into identity politics and social movements in countries as diverse as Brazil, Switzerland, Vietnam and Zambia are offered alongside new approaches to understanding the determinants and incentives which generate political will and commitment. This book was published as a special issue of *Contemporary Politics*.

Risk in Extreme Environments Vicki M. Bier, 2017-10-19 Risk in Extreme Environments presents a wide ranging discussion of approaches for assessing and managing extreme risks. Extreme events are not only severe but also outside the normal range of experience of the system in question and can include environmental catastrophe, engineering failure, financial or business meltdown and nuclear or other extreme terrorism. The book focuses on synthesizing research results in a way that provides insights useful to decision makers and enables them to ask probing questions about the risks faced by their organizations, identify creative solutions and minimize the neglect of extreme risks that can come from a focus on mundane or ordinary management challenges. The book details case studies on nuclear power, infectious diseases and global catastrophic risks in addition to sections on risk assessment, risk management and risk perceptions. Since effective management benefits from an interdisciplinary perspective the chapter authors include

experts in economics engineering geography law political science psychology sociology and science in addition to risk analysis Risk in Extreme Environments is an accessible and valuable resource for risk managers and other decision makers responsible for large complex business and government decisions while also providing enough detail and references to be informative for risk analysts interested in learning more about technical aspects of the various methods **AIDS** The aids2031 Consortium,2010-12-09 AIDS is a continuing worldwide health crisis Over 25 000 000 people have died from AIDS and more than 33 000 000 are infected today While treatments in the developed world have moved AIDS from a fatal to a chronic highly expensive disease it remains the sixth greatest cause of death globally and most of those infected in the developing world don t have access to treatments Here the AIDS 2031 Commission s experts report on the first 50 years of the AIDS pandemic the 30 years that have passed since AIDS was first diagnosed and the prospects and best plans to address the ongoing worldwide AIDS epidemic over the coming 20 years The authors address the entire scope of the pandemic basic science public health funding treatment options and social and societal impacts and review the full range of possible and recommended responses over the next two decades They carefully assess the progress that has been made and both persistent and emerging challenges Written to be easily understandable by all readers this book is the single best source of reliable information on where the pandemic stands today where it s headed and what can be done to create better outcomes between now and 2031 *Bulletin of the World Health Organization* World Health Organization,2011 **Cumulated**
