Pfenning, Jeffrey G. Davis, Timothy O. Matson, Gregory J. Lipps (Jr), Douglas E. Wynn, Brian J. Armitage, 2013 Ohio's resident amphibians currently include 25 species and subspecies of salamanders, a complex of unisexual ambystomatid salamanders, and 14 species of frogs and toads. Existing comprehensive works of amphibians for Ohio are dated and out of print. Given this deficiency and pressure by recent survey and monitoring activity and current research needs, the decision to produce a comprehensive book about Ohio's amphibians, which this volume represents, quickly followed. Focusing on verifiable information about the amphibian species of Ohio, the core of this tome is comprised of 37 chapters organized by sections on salamanders and on frogs and toads, covering all amphibians in Ohio that have been documented and vouchered. Preceding these taxonomic species-oriented chapters are sections on the history of herpetological work in Ohio, a summary of the Ohio environment in which its amphibian species exist, informative introductions to amphibian systematics, brief summaries of the two groups and keys to adult and larval stages. Following the species accounts are sections on potential occurrences in Ohio, on species ranking based on conservation status and knowledge on amphibian conservation, on amphibian distribution, on environmental applications, and a summary. Completing the book are two appendices involving field and vouchering documentation techniques, a glossary, a combined and comprehensive listing of cited literature, and an index. This book is both scientifically accurate and written in a style suitable for the complete spectrum of individuals and entities who are professionally or casually involved or interested in amphibians.
