Residence Time Validation Study** Baru Debtera,2021-11-29 Academic Paper from the year 2021 in the subject Physics Mechanics language English abstract In this study numerical simulations of a gas solid fluidized bed reactor involving a two fluid Eulerian multiphase model and incorporating the Kinetic Theory of Granular Flow KTGF for the solids phase have been performed using a commercial Computational Fluid Dynamics CFD software The fluidized bed setup consists of 1.5 m height and 0.2 m diameter in which a series of experiments were performed using Helium tracer to determine the Residence Time Distribution RTD at various normalized velocities i.e with different degrees of gas solids mixing Both 2D and 3D simulations of the fluidized bed reactor are performed The main purpose of this study is to

understand the hydrodynamic behavior of a gas solid fluidized bed reactor through a framework of Eulerian multiphase model and to analyze hydrodynamic behavior of the gas solids mixing

Computational Fluid Dynamics Adela Ionescu, 2018-02-14 This book is the result of a careful selection of contributors in the field of CFD It is divided into three sections according to the purpose and approaches used in the development of the contributions The first section describes the high performance computing HPC tools and their impact on CFD modeling The second section is dedicated to CFD models for local and large scale industrial phenomena Two types of approaches are basically contained here one concerns the adaptation from global to local scale e g the applications of CFD to study the climate changes and the adaptations to local scale The second approach very challenging is the multiscale analysis The third section is devoted to CFD in numerical modeling approach for experimental cases Its chapters emphasize on the numerical approach of the mathematical models associated to few experimental industrial cases Here the impact and the importance of the mathematical modeling in CFD are focused on It is expected that the collection of these chapters will enrich the state of the art in the CFD domain and its applications in a lot of fields This collection proves that CFD is a highly interdisciplinary research area which lies at the interface of physics engineering applied mathematics and computer science
