Basic Physics II, Spring 2016 Chadwick Young, 2015-12-11 workbook for PHYS 102 Precision Measurements to Test the Standard Model and for Explosive Nuclear Astrophysics Adrian A. Valverde, 2019-11-22 This thesis presents two significant results in the field of precision measurements in low energy nuclear physics Firstly it presents a precise half life determination of ^{11}C leading to the most precise $t_{1/2}$ value for a beta decay transition between mirror nuclides an important advance in the testing of the electroweak sector of the Standard Model Secondly it describes a high precision mass measurement of ^{56}Cu a critical nucleus for determining the path of the astrophysical rapid proton capture process performed by the author using the LEBIT Penning trap at the National Superconducting Cyclotron Laboratory This new measurement resolves discrepancies in previously reported calculated mass excesses In addition the thesis also presents the construction and testing of a radio frequency quadrupole cooler and buncher that will be part of the future N 126 factory at Argonne National Laboratory aimed at producing nuclei of interest for the astrophysical rapid neutron capture process for the first time **On the Cognitive, Ethical, and Scientific Dimensions of Artificial Intelligence** Don Berkich, Matteo Vincenzo d'Alfonso, 2019-01-28 This edited volume explores the intersection between philosophy and computing It features work presented at the 2016 annual meeting of the International Association for Computing and Philosophy The 23 contributions to this volume neatly represent a cross section of 40 papers four keynote addresses and eight symposia as they cut across six distinct research agendas The volume begins with foundational studies in computation and information epistemology and philosophy of science and logic The contributions next examine research into computational aspects of cognition and philosophy of mind This leads to a look at moral dimensions of man machine interaction as well as issues of trust privacy and justice This multi disciplinary or better yet a disciplinary investigation reveals the fruitfulness of erasing distinctions among and boundaries between established academic disciplines This should come as no surprise The computational turn itself is a disciplinary and no former discipline whether scientific artistic or humanistic has remained unchanged Rigorous reflection on the nature of these changes opens the door to inquiry into the nature of the world what constitutes our knowledge of it and our understanding of our place in it These investigations are only just beginning The contributions to this volume make this clear many encourage further research and end with open questions **Time of Nature and the Nature of Time** Christophe Bouton, Philippe Huneman, 2017-05-30 This volume addresses the question of time from the perspective of the time of nature Its aim is to provide some insights about the nature of time on the basis of the different uses of the concept of time in natural sciences Presenting a dialogue between philosophy and science it features a collection of papers that investigate the representation modeling and understanding of time as they appear in physics biology geology and paleontology It asks questions such as whether or not the notions of time in the various sciences are reducible to the same physical time what status should be given to timescale differences or what are the specific epistemic issues raised

by past facts in natural sciences The book first explores the experience of time and its relation to time in nature in a set of chapters that bring together what human experience and physics enable metaphysicians logicians and scientists to say about time Next it studies time in physics including some puzzling paradoxes about time raised by the theory of relativity and quantum mechanics The volume then goes on to examine the distinctive problems and conceptions of time in the life sciences It explores the concept of deep time in paleontology and geology time in the epistemology of evolutionary biology and time in developmental biology Each scientific discipline features a specific approach to time and uses distinctive methodologies for implementing time in its models This volume seeks to define a common language to conceive of the distinct ways different scientific disciplines view time In the process it offers a new approach to the issue of time that will appeal to a wide range of readers philosophers and historians of science metaphysicians and natural scientists be they scholars advanced students or readers from an educated general audience

Women in the History of Analytic Philosophy Jeanne Peijnenburg, Sander Verhaegh, 2023-01-01 This book contains a selection of papers from the workshop Women in the History of Analytic Philosophy held in October 2019 in Tilburg the Netherlands It is the first volume devoted to the role of women in early analytic philosophy It discusses the ideas of ten female philosophers and covers a period of over a hundred years beginning with the contribution to the Significance Movement by Victoria Lady Welby in the second half of the nineteenth century and ending with Ruth Barcan Marcus's celebrated version of quantified modal logic after the Second World War The book makes clear that women contributed substantially to the development of analytic philosophy in all areas of philosophy from logic epistemology and philosophy of science to ethics metaphysics and philosophy of language It illustrates that although women's voices were no different from men's as regards their scope and versatility they had a much harder time being heard The book is aimed at historians of philosophy and scholars in gender studies

Transforming Education for Sustainability María S. Rivera Maulucci, Stephanie Pfirman, Hilary S. Callahan, 2023-06-20 This book investigates how educators and researchers in the sciences social sciences and the arts connect concepts of sustainability to work in their fields of study and in the classrooms where they teach the next generation Sustainability with a focus on justice authenticity and inclusivity can be integrated into many different courses or disciplines even if it is beyond their historical focus The narratives describe sustainability education in the classroom the laboratory and the field broadly defined and how the authors navigate the complexities of particular sustainability issues such as climate change water quality soil health biodiversity resource use and education in authentic ways that convey their complexity the sociopolitical context and their hopes for the future The chapters explore how faculty engage students in learning about sustainability and the ways in which working at the edge of what we know about sustainability can be a significant source of engagement motivation and challenge The authors discuss how they create learning experiences that foster democratic practices in which students are not just following protocols but have a stake in

creative decision making collecting and analysing data and posing authentic questions They also describe what happens when students are not just passively receiving information but actively analysing debating dialoguing arguing from evidence and constructing nuanced understandings of complex socioscientific sustainability issues The narratives include undergraduate student perspectives on what it means to engage in sustainability research and learning how students navigate the complexities and contradictions inherent in sustainability issues what makes for authentic empowering learning experiences and how students are encouraged to persevere in the field This is an open access book
