Wagner, Christopher Schatschneider, Caroline Phythian-Sence, 2009-06-19 What cognitive processes and skills do children draw on to make meaning from text How are these capacities consolidated over the course of development What puts some learners at risk for comprehension difficulties This authoritative volume presents state of the science research on the behavioral and biological components of successful reading comprehension Uniquely integrative the book covers everything from decoding fluency and vocabulary knowledge to embodiment theory eye movements gene environment interactions and neurobiology The contributors are prominent investigators who describe their methods and findings in depth and identify important implications for the classroom **Beyond Pleasure and Pain** E. Tory Higgins, 2011-10-11 How does motivation work Scientific research shows that people are motivated to be effective in different ways that go beyond the pursuit of pleasure and the avoidance of pain In this text E Tory Higgins provides a new theory of motivation that argues that people are motivated by the pursuit of value truth and control but the central story to motivation lies in how these elements work together *Beyond the Learning Curve* Craig Speelman, Kim Kirsner, 2005-10-13 For years now learning has been at the heart of research within cognitive psychology How do we acquire new knowledge and new skills Are the principles underlying skill acquisition unique to learning or similar to those underlying other behaviours Is the mental system essentially modular or is the mental system a simple product of experience a product that inevitably reflects the shape of the external world with all of its specialisms and similarities This new book takes the view that learning is a major influence on the nature of the processes and representations that fill our minds Throughout the authors review and consider the areas of skill acquisition and lexical representation to illustrate the effects that practice can have on cognitive processes They also draw parallels between theories in physical and biological domains to propose not only a new theory of mental function but also demonstrate that the mind is essentially subject to the same natural laws as the physical world In so doing Speelman and Kirsner present a new perspective on psychology one that identifies universal principles underlying all behaviours and one which contrasts markedly from our current focus on highly specific behaviours Accessibly written *Beyond the Learning Curve* is a thought provoking and challenging new text for students and researchers in the cognitive sciences **Beyond Individual Differences** Ference Marton, 1983 **A Practice Beyond Cultural Humility** Claudia Grauf-Grounds, Tina Sellers, Scott A.
