## DYNAMICS II: MOTION IN A PLANE

### Conceptual Questions

**8.1.** For an object in uniform circular motion the speed is constant (that's what uniform means), the angular velocity is constant, and the magnitude of the net force is constant. The velocity and centripetal acceleration are both vectors whose magnitude is constant but whose direction changes.

**8.2.** The free-body diagram (a) is correct. The forces acting on the car at the bottom of the hill are the downward gravitational force and an upward normal force. The car can be considered to be in circular motion about a point above the bottom center of the valley, which requires a net force toward the center of the circle. In this case, the circle center is above the car, so the normal force is greater than the gravitational force.

**8.3.**  $T_c > T_a = T_d > T_b$ . Use  $T = \frac{mv^2}{r}$ . For (a),  $T_a = \frac{mv^2}{r}$ . For (b),  $T_b = \frac{mv^2}{2r} = \frac{1}{2}T_a$ . For (c),  $T_c = \frac{(2m)v^2}{r} = 2T_a$ .

For (d),  $T_d = \frac{(2m)v^2}{2r} = T_a$ .

**8.4.** The tension in the vine at the lowest part of Tarzan's swing is greater than the gravitational force on Tarzan. If Tarzan is at rest on the vine, just hanging, the tension in the vine is equal to the gravitational force on Tarzan. But when Tarzan is swinging he is in circular motion, with the center of the circle at the top end of the vine, and the vine must provide the additional centripetal force necessary to move him in a circle.

**8.5.** (a) The difference in the tension between A and B is due to the centripetal force  $(F_c)_{\text{net}} = \frac{mv^2}{r}$ . Since the velocity  $v$  is the same for both, the greater radius for B means that the tension in case A is greater than for case B.  
(b) In this case, we use  $(F_c)_{\text{net}} = m\omega^2 r$ . The angular velocity  $\omega$  is the same for both A and B, so the larger radius for B means that the tension in case A is less than the tension for case B.

**8.6.** Neither Sally nor Raymond is completely correct. Both have partially correct descriptions, but are missing key points. In order to speed up, there must be a nonzero acceleration parallel to the track. In order to move in a circle, there must be a nonzero centripetal acceleration. Since both of these are required, the net force points somewhere between the forward direction (parallel to the track) and the center of the circle.

**8.7.** (a) The plane is in dynamic equilibrium, so the net force on the plane is zero.  
(b) The vertical forces cancel, and so do the horizontal forces, so the net force is zero. The plane is traveling in the positive  $x$  direction.

Technical Drawing 101 with AutoCAD 2014 Antonio Ramirez,Douglas W. Smith,Jana Schmidt,2013 Technical Drawing 101 covers topics ranging from the most basic such as making freehand multiview sketches of machine parts to the advanced creating an AutoCAD dimension style containing the style settings defined by the ASME Y14.5 2009 Dimensioning and Tolerancing standard But unlike the massive technical drawing reference texts on the market Technical Drawing 101 aims to present just the right mix of information and projects that can be reasonably covered by faculty and assimilated by students in one semester Both mechanical and architectural projects are introduced to capture the interest of more students and to offer a broader appeal The authors have also created video tutorials for this book in which they demonstrate how to use many of AutoCAD's tools and commands The CAD portion of the text incorporates drafting theory whenever possible and covers the basics of drawing setup units limits and layers the tools of the Draw Modify and Dimension toolbars and the fundamentals of 3D modeling By focusing on the fundamental building blocks of CAD Technical Drawing 101 provides a solid foundation for students going on to learn advanced CAD concepts and techniques paper space viewports xrefs annotative scaling etc in intermediate CAD courses In recognition of the diverse career interests of our students Technical Drawing 101 includes projects in which students create working drawings for a mechanical assembly as well as for an architectural project We include architectural drawing because our experience has shown that many if not most first semester drafting students are interested in careers in the architectural design field and that a traditional technical drawing text which focuses solely on mechanical drawing projects holds little interest for these students The multidisciplinary approach of this text and its supporting materials is intended to broaden the appeal of the curriculum and increase student interest and it is hoped future enrollments
