Controlling Aircraft—From Humans to Autonomous Systems Aharon David, 2024-09-25 Paris June 18 1914 Crowds gathered at the Concours de la Sécurité Aéroplane to witness 21 year old Lawrence Sperry demonstrate his newly invented gyroscopic stabilizer With his hands in the air the device flew his Curtiss C 2 flying boat Only a decade after the Wright brothers initial flight the first autopilot made its public debut As impressive as this public demonstration was it was merely a humble although spectacular moment of foreshadowing Even today 110 years later the process of automating aspects of flight has not yet fully concluded leading to deteriorating insight into the automatic behavior of aircraft systems and even the waning of human instincts and intuition *Controlling Aircraft From Humans to Autonomous Systems Rise of the Machines* covers the distancing of humans from their flying machines through more than a century long process of assisting systems introduction the positive and negative consequences of this process and mitigation solutions for the negative consequences Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2024020> *Advanced Avionics on the Airbus A330/A340 and the Boeing 777 Aircraft*, 1993 **Aerospace Psychology and Human Factors** Ioana V. navigation attitude and other critical systems By becoming familiar with your aircraft's engine and the instruments with which it may be equipped your flight performance will surpass that of others You will fly with an understanding of every sound every indication and every response from the aircraft Taking your professional career to the highest level is not only about accumulating experience and flight hours but also about filling your path with theoretical knowledge that will accompany you throughout your aeronautical life *Aviation and Human Factors* Jose Sanchez-Alarcos, 2019-06-19 Air safety is right now at a point where the chances of being killed in an aviation accident are far lower than the chances to winning a jackpot in any of the major lotteries However keeping or improving that performance level requires a critical analysis of some events that despite scarce point to structural failures in the learning process The effect of these failures could increase soon if there is not a clear and right development path This book tries to identify what is wrong why there are things to fix and some human factors principles to keep in aircraft design and operations Features Shows through different events how the system learns through technology practices and regulations and the pitfalls of that learning process Discusses the use of information technology in safety critical environments and why procedural knowledge is not enough Presents air safety management as a successful process but at the same time failures coming from technological and organizational features are shown Offers ways to improve from the human factors side by getting the right lessons from recent events
