Advances in Human Factors and Systems Interaction Isabel L. Nunes, 2019-06-04 This book reports on cutting edge research into innovative system interfaces highlighting both lifecycle development and human technology interaction especially in virtual augmented and mixed reality systems. It describes advanced methodologies and tools for evaluating and improving interface usability and discusses new models as well as case studies and good practices. The book addresses the human hardware and software factors in the process of developing interfaces for optimizing total system performance while minimizing their costs. It also highlights the forces currently shaping the nature of computing and systems such as the importance of portability and technologies for reducing power requirements, the necessity of a better assimilation of computation in the environment as well as solutions to promote accessibility to computers and systems for people with special needs. The book, which is based on the AHFE 2019 International Conference on Human Factors and Systems Interaction held on July 24-28, 2019 in Washington D.C., USA, offers a timely survey and practice-oriented guide for systems interface users and developers alike.

Air Navigation Octavian Thor Pleter, 2024-04-22 This book takes a new approach to air navigation, extending the classic scope of positioning and guidance to efficient and safe 4D flight trajectory management. Modern air navigation aims at flight trajectories optimisation. There is an infinite number of solutions to the classic navigation problem of flying from one airport to another, but most of them are wasteful of resources and even risky. Minimising all costs and risks incurred by the 4D flight trajectory makes air navigation both efficient and safe, which are key factors in air navigation services. Beyond minimising fuel burn and CO2 efficiency, it addresses non-CO2 emissions and noise. This is a visually intensive book using examples and case studies to illustrate the concepts, the physics of navigation, and the mathematical models involved. Numerical examples reflect its problem-solving nature. It is useful to aerospace students, engineers, pilots, air traffic controllers, technicians, and scientists curious about aviation.
