

This article is the third in a series on integrating the programming power of AutoCAD® VBA with the functionality found in other Windows applications—specifically, Microsoft Excel. In the [first segment](#) we discussed what was possible, in the [second segment](#) we discussed how to establish a basic link with Excel through AutoCAD VBA to open an Excel session and close it down, and in this session we discuss how to port formatted data from AutoCAD VBA to Excel worksheets.

Objects of Our Desire

Now that you know how to make an AutoCAD VBA routine speak "Excel-ese," and how to launch a session of Excel, let's examine the Workbook and the Worksheet objects in Excel.

You can study the properties of these and other Excel objects through the AutoCAD VBA IDE (integrated development environment) by:

1. Running the IDE (use the VBAIDE command).
2. Using the Tools/References pulldown menu option to activate a Microsoft Excel Object Library reference by placing a check next to this entry in the References listbox.
3. Using the Object Browser tool (use the F2 function key in the VBA IDE or use the View/Object Browser pull-down menu option) with the primary Combobox set to Excel (see Figure 1).
