Improvement Of Myocardial Perfusion:

Improvement of Myocardial Perfusion J. Meyer,R. Erbel,H.J. Rupprecht,2012-12-06 This book contains the manuscripts of the majority of the papers given during the symposium Improvement of Myocardial Perfusion which was held from September 27 29 1984 in Mainz Germany It has been the purpose of this meeting to focus the interest of scientifically and clinically interested cardiologists on the new developments in this field We therefore chose the subtitle Medical Mechanical Surgical Approach The medical improvements in myocardial perfusion have been brought about by the application of streptokinase urokinase and tissue type plasminogen activator in the first hours after the onset of an acute myocardial infarction The different modes of application and the possibilities to evaluate and eventually to quantify the results of these treatments were addressed during the first part of the meeting The mechanical way to improve perfusion nowadays mainly consists of the application of intracoronary balloon angioplasty Although since 1977 the treatment has become a routine method several questions are still open such as the exact mode of action the reaction of the vessel wall the optimal pressure and balloon size as well as the long term results and the prevention of restenosis

Coronary

Vasculature Robert J. Tomanek,2012-10-19 Ischemic heart disease is the leading cause of morbidity and mortality in the developed world The high metabolism and oxygen demand of the cardiac myocardium depends on both a high blood flow and a rich capillary density For this reason the growth of the coronary vasculature is vital not only in early development but also in the adult faced with various stresses Novel technologies have enabled the discovery of the molecular mechanisms underlying the growth and assembly coronary vessels and this volume covers the hierarchy of the coronary vasculature from its embryonic origins through its postnatal growth adulthood and senescence Chapters address normal coronary development coronary anomalies and their possible underlying developmental errors coronary vessel adaptations to exercise training aging hypoxia myocardial ischemia and cardiac hypertrophy This comprehensive overview of current research in coronary vessels and myocardial perfusion was written by Dr Robert J Tomanek Emeritus Professor of Anatomy and Cell Biology at the University of Iowa The book reviews discusses and integrates findings from various areas of coronary vasculature research and as a result will be a valuable reference source for cardiovascular scientists and physicians for many years to come
