## **Bunch Of Five Bunch Of Five:**

**The Power of Numbers** Stilovsky, Schrödinger, 2018-02-13 In today's world the use of numbers grows by the day and we depend on them for so much. This book contains a series of lists that contain information about numbers and their use in society. They will be most useful to those with a quizzical nature but should be of general interest to all. Schrödinger's cat was an infamous and cruel thought experiment dreamt up in the last century to expose one of the mistaken ideas current in science at that time. Since escaping from the box, Felix has taken up writing and in collaboration with retired water engineer Pyotr Stilovsky he has compiled this factual compendium.

**The Acquisition of Numeral Classifiers** Kasumi Yamamoto, 2011-05-03 The book is about the numeral classifier system and the acquisition of Japanese classifiers by Japanese children. It consists of two parts. First it provides a general typological characterization of numeral classifier phrases and discusses problems in determining what constitutes the nature of classifiers. It also discusses the semantic properties of numeral classifiers based on an analysis of four languages from four different language families. Second it examines the acquisitions of Japanese numeral classifiers by Japanese preschool children ages 3 to 6 with a primary emphasis on the development of comprehension. The importance of the study is that it reveals that young children have a much greater sensitivity to the conceptual underpinnings of the numeral classifier system than was previously considered to be the case. The research results also provide a converging source of evidence that young children often come to initially grasp the structure of the world in ways that are better understood in cognitive than perceptual terms. The implications will contribute to not only the area of language acquisition but also categorization and conceptual development.

This book brings together diverse recent developments exploring social, cultural, political dimensions in mathematics education. It builds theoretical ideas from a careful, substantial description of practice in the attempt to improve both theory and practice in mathematics education. In doing so, it interrogates and develops theoretical research tools for mathematics
