**Lighting** D.C. Pritchard, 2014-09-25 Lighting now in its sixth edition is the standard text on the principles and practice of lighting interiors and exteriors. The book introduces all the main principles of light and colour along with the design of general lighting schemes. It complies with the CIBSE lighting code and guides covers the main calculations that a lighting designer needs to do and includes worked examples. The book starts with the theory of light and how it is perceived by the eye. It looks at the units used and the subjective effect of colour. The characteristics of various types of lamp are described along with luminaires the equipment that contains the lamps. The effects of daylight on light levels indoors are described before going on to look at the design of general lighting schemes. The book concludes with chapters looking at lighting for specific applications including roadway lighting, floodlighting and the interior of specific building types.

**External Components** Michael McEvoy, 2014-06-03 Analyses in conjunction with Internal Components the performance requirements of building components and the effectiveness of typical solutions. External components integrates logically with the theoretical aspects explored in other titles in the Mitchell's building series. It encourages evaluation of alternative methods for putting components together.

**Access Scaffolding** Stewart Champion, 2014-07-22 Access scaffolding is the most important element of plant for building civil engineering and structural engineering contractors. In fact a building or structure cannot be constructed to a height of more than two metres without platforms to work from. These platforms have to be constructed on the site in the minimum of time but nevertheless backed up by accurate calculations and design details. Access Scaffolding brings together for the first time all the elements of scaffolding providing a comprehensive and unique guide to the best practice in scaffolding its engineering properties and the hazards involved. The book covers the very wide varieties of structure which have to be built and used in practice including suspended and completed structures. Diagrammatic details of the commonest types are featured. Access Scaffolding is a unique and indispensable handbook on the subject for contractor's field and design staff, safety inspectors of statutory bodies and structural civil and building consulting engineers. It is also a useful resource for students of structural and civil engineering and building degree courses.
