*The British National Bibliography* Arthur James Wells,2009 *Deploying IP and MPLS QoS for Multiservice Networks* John William Evans,Clarence Filsfil,2010-07-26 QoS short for quality of service is one of the most important goals a network designer or administrator will have Ensuring that the network runs at optimal precision with data remaining

accurate traveling fast and to the correct user are the main objectives of QoS. The various media that fly across the network including voice, video, and data have different idiosyncrasies that try the dimensions of the network. This malleable network architecture poses an always moving potential problem for the network professional. The authors have provided a comprehensive treatise on this subject. They have included topics such as traffic engineering, capacity planning, and admission control. This book provides real world case studies of QoS in multiservice networks. These case studies remove the mystery behind QoS by illustrating the how, what, and why of implementing QoS within networks. Readers will be able to learn from the successes and failures of these actual working designs and configurations. Helps readers understand concepts of IP QoS by presenting clear descriptions of QoS components, architectures, and protocols. Directs readers in the design and deployment of IP QoS networks through fully explained examples of actual working designs. Contains real life case studies which focus on implementation.

*Designing and Implementing IP/MPLS-Based Ethernet Layer 2 VPN Services* Zhuo Xu, 2010-01-15. A guide to designing and implementing VPLS services over an IP/MPLS switched service provider backbone. Today's communication providers are looking for convenience, simplicity, and flexible bandwidth across wide area networks, but with the quality of service and control that is critical for business networking applications like video, voice, and data. Carrier Ethernet VPN services based on VPLS makes this a reality. Virtual Private LAN Service (VPLS) is a pseudowire (PW) based multipoint-to-multipoint layer 2 Ethernet VPN service provided by service providers. By deploying a VPLS service to customers, the operator can focus on providing high throughput, highly available Ethernet bridging services and leave the layer 3 routing decision up to the customer. Virtual Private LAN Services (VPLS) is quickly becoming the number one choice for many enterprises and service providers to deploy data communication networks. Alcatel-Lucent VPLS solution enables service providers to offer enterprise customers the operational cost benefits of Ethernet with the predictable QoS.
