**Advances in Generative Lexicon Theory** James Pustejovsky, Pierrette Bouillon, Hitoshi Isahara, Kyoko Kanzaki, Chungmin Lee, 2012-12-18 This collection of papers takes linguists to the leading edge of techniques in generative lexicon theory the linguistic composition methodology that arose from the imperative to provide a compositional semantics for the contextual modifications in meaning that emerge in real linguistic usage Today's growing shift towards distributed compositional analyses evinces the applicability of GL theory and the contributions to this volume presented at three international workshops GL 2003 GL 2005 and GL 2007 address the relationship between compositionality in language and the mechanisms of selection in grammar that are necessary to maintain this property The core unresolved issues in compositionality relating to the interpretation of context and the mechanisms of selection are treated from varying perspectives within GL theory including its basic theoretical mechanisms and its analytical viewpoint on linguistic phenomena

**Argument Structure in Flux** Elly van Gelderen, Jóhanna Barðdal, Michela Cennamo, 2013-06-15 The present volume is centered around five linguistic themes argument structure and encoding strategies argument structure and verb classes unexpressed arguments split intransitivity and existential and presentational constructions The articles also cover a variety of typologically different languages and they offer new data from under researched languages on the issues of event and argument structure In some cases novel perspectives from widely discussed languages on highly debated topics are offered also addressing more theoretical aspects concerning the predictability and derivation of linking Several contributions apply current models of the lexicon syntax interface to synchronic data Other contributions focus on diachrony and are based on extensive use of corpora Yet others although empirically and theoretically grounded privilege a methodological discussion presenting analyses based on thorough and long standing fieldwork

**The Cambridge Handbook of Role and Reference Grammar** Delia Bentley, Ricardo Mairal Usón, Wataru Nakamura, Robert D. Van Valin, Jr, 2023-06-07 Role and Reference Grammar RRG is a theory of language in which linguistic structures are accounted for in terms of the interplay of discourse semantics and syntax With contributions from a team of leading scholars this Handbook provides a field defining overview of RRG Assuming no prior knowledge it introduces the framework step by step and includes a pedagogical guide for instructors It features in depth discussions of syntax morphology and lexical semantics including treatments of lexical and grammatical categories the syntax of simple clauses and complex sentences and how the linking of syntax with semantics and discourse works in each of these domains It illustrates RRG's contribution to the study of language acquisition language change and processing computational linguistics and neurolinguistics and also contains five grammatical sketches which show how RRG analyses work in practice Comprehensive yet accessible it is essential reading for anyone who is interested in how grammar interfaces with meaning

**Word Prominence in Languages with Complex Morphologies** Ksenia Bogomolets, Harry van der Hulst, 2023 This book focuses on the theoretical and analytical challenges that languages with complex morphologies

pose for the theory and typology of word level prosodic phenomena The first three chapters explore general theoretical issues while later chapters offer a series of case studies from a range of genetically and geographically diverse languages

**Argument Realisation in Complex Predicates and Complex Events** Brian Nolan, Elke Diedrichsen, 2017-01-26 This book offers a comprehensive investigative study of argument realisation in complex predicates and complex events at the syntax semantic interface across a wide variety of the world's languages ranging over languages such as German Irish Sicilian and Italian Lithuanian Estonian and other Finno Ugric languages Pitjantjatjara Yankunytjatjara and Ngaanyatjarra from Australia's Western Desert region Japanese Tepehua Totonacan Mexico Cheyenne Mexican Spanish Boharic Coptic and Persian This volume examines the syntactic variation of complex events complex predicates and multi verb constructions within a single clause where the clause is viewed as representing a single event studying their semantics and syntax within functional cognitive and constructional frameworks to arrive at a better understanding of their cross linguistic behaviour and how they resonate in syntax These constructions manifest considerable variability in cross linguistic comparisons of complex predicate formation In European languages for example typically one of the verbs in a verb construction highlights a phase of an underspecified event while the matrix verb specifies the actual event In contrast serial verbs require each verb to provide a sub event dimension within a complex event that is viewed holistically as unitary in syntax This book contributes to an understanding of complex events complex predicates and multi verb constructions across languages their syntactic constructional patterns and argument realisation

**Paul's Language of Ζῆλος** Benjamin J. Lappenga, 2015-09-29 In Paul's Language of Benjamin Lappenga harnesses linguistic insights recently formulated within the framework of relevance theory to argue that within the letters of Paul specifically Galatians 1 2 Corinthians and Romans the word group is monosemic Linking the responsible treatment of lexemes in the interpretive process with new insight into Paul's rhetorical and theological task Lappenga demonstrates that the mental encyclopedia activated by the term is shaped within Paul's discourse and thus transforms the meaning of for attentive model readers Such identity forming strategies promote a series of practices that may be grouped under the rubric of rightly directed specifically emulation of weak people and things eager pursuit of community building gifts and the avoidance of jealous rivalry

**African languages from a Role and Reference Grammar perspective** Jens Fleischhauer, Claudius Patrick Kihara, 2023-05-08 The volume is a collection of papers which apply Role Reference Grammar RRG to African languages RRG is a functional theory of syntax which has been developed on the basis of two leading questions First how would a syntactic theory look like which starts from exotic languages rather than English Second how can the interaction between syntax semantics and pragmatics in different grammatical systems best modelled and explained Although RRG took linguistic diversity serious from its very beginning African languages have been underrepresented in the development of the theory Given the sheer number African languages deserve a wider coverage in a syntactic theory which takes linguistic diversity seriously The volume is intended to fill this gap and comprises a selection of

papers which investigate different aspects related to the syntax semantics pragmatics interface of different African languages This includes argument doubling and dislocation in isiZulu complex referential phrases in G k y serial verb constructions in Igbo locative complements in Hausa and Zarma Chiine and focus constructions in Emai The papers will extent the current RRG approach to new languages and phenomena *Linguistics and Language Behavior Abstracts* ,2009

**Resources in Education** ,1997 *Whitaker's Cumulative Book List* ,1973 Information Processing International Federation for Information Processing,1969 The Generative Lexicon James Pustejovsky,1998-01-23 The first formally elaborated theory of a generative approach to word meaning The Generative Lexicon lays the foundation for an implemented computational treatment of word meaning that connects explicitly to a compositional semantics The Generative Lexicon presents a novel and exciting theory of lexical semantics that addresses the problem of the multiplicity of word meaning that is how we are able to give an infinite number of senses to words with finite means The first formally elaborated theory of a generative approach to word meaning it lays the foundation for an implemented computational treatment of word meaning that connects explicitly to a compositional semantics In contrast to the static view of word meaning where each word is characterized by a predetermined number of word senses that imposes a tremendous bottleneck on the performance capability of any natural language processing system Pustejovsky proposes that the lexicon becomes an active and central component in the linguistic description The essence of his theory is that the lexicon functions generatively first by providing a rich and expressive vocabulary for characterizing lexical information then by developing a framework for manipulating fine grained distinctions in word descriptions and finally by formalizing a set of mechanisms for specialized composition of aspects of such descriptions of words as they occur in context extended and novel senses are generated The subjects covered include semantics of nominals figure ground nominals relational nominals and other event nominals the semantics of causation in particular how causation is lexicalized in language including causative unaccusatives aspectual predicates experiencer predicates and modal causatives how semantic types constrain syntactic expression such as the behavior of type shifting and type coercion operations a formal treatment of event semantics with subevents and a general treatment of the
