Kernel Methods for Remote Sensing Data Analysis Gustau Camps-Valls,Lorenzo Bruzzone,2009-09-03 Kernel methods have long been established as effective techniques in the framework of machine learning and pattern recognition and have now become the standard approach to many remote sensing applications. With algorithms that combine statistics and geometry kernel methods have proven successful across many different domains related to the analysis of images of the Earth acquired from airborne and satellite sensors including natural resource control detection and monitoring of anthropic infrastructures e.g. urban areas agriculture inventorying disaster prevention and damage assessment and anomaly and target detection. Presenting the theoretical foundations of kernel methods KMs relevant to the remote sensing domain this book serves as a practical guide to the design and implementation of these methods. Five distinct parts present state of the art research related to remote sensing based on the recent advances in kernel methods analysing the related methodological and practical challenges. Part I introduces the key concepts of machine learning for remote sensing and the theoretical and practical foundations of kernel methods. Part II explores supervised image classification including Super Vector Machines SVMs kernel discriminant analysis multi temporal image classification target detection with kernels and Support Vector Data Description SVDD algorithms for anomaly detection. Part III looks at semi supervised classification with transductive SVM approaches for hyperspectral image classification and kernel mean data classification. Part IV examines regression and model inversion including the concept of a kernel unmixing algorithm for hyperspectral imagery the theory and methods for quantitative remote sensing inverse problems with kernel based equations kernel based BRDF Bidirectional Reflectance Function and temperature retrieval KMs. Part V deals with kernel based feature extraction and provides a review of the principles of several multivariate analysis methods and their kernel extensions. This book is aimed at engineers scientists and researchers involved in remote sensing data processing and also those working within machine learning and pattern recognition.

Advances in Natural Computation Li-cheng Jiao,2006 Annotation This is volume I of the proceedings of the Second International Conference on Natural Computation ICNC 2006 After a demanding review process 168 carefully revised full papers and 86 revised short papers were selected from 1915

submissions for presentation in two volumes This first volume includes 130 papers related to artificial neural networks natural neural systems and cognitive science neural network applications as well as evolutionary computation theory and algorithms **Kernel Methods in Computer Vision** Christoph H. Lampert,2009 Few developments have influenced the field of computer vision in the last decade more than the introduction of statistical machine learning techniques Particularly kernel based classifiers such as the support vector machine have become indispensable tools providing a unified framework for solving a wide range of image related prediction tasks including face recognition object detection and action classification By emphasizing the geometric intuition that all kernel methods rely on Kernel Methods in Computer Vision provides an introduction to kernel based machine learning techniques accessible to a wide audience including students researchers and practitioners alike without sacrificing mathematical correctness It covers not only support vector machines but also less known techniques for kernel based regression outlier detection clustering and dimensionality reduction Additionally it offers an outlook on recent developments in kernel methods that have not yet made it into the regular textbooks structured prediction dependency estimation and learning of the kernel function Each topic is illustrated with examples of successful application in the computer vision literature making Kernel Methods in Computer Vision a useful guide not only for those wanting to understand the working principles of kernel methods but also for anyone wanting to apply them to real life problems
