Advances In Supramolecular Chemistry Volume 4 Volume 4:

Expanded, Contracted & Isomeric Porphyrins Jonathan L. Sessler, Steven J. Weghorn, 1997 Paperback The porphyrins are a class of naturally occurring macrocycles and are ubiquitous in our world As such they have been called the Pigments of Life This auspicious designation reflects their importance in numerous biological functions Indeed life as we understand it relies on the full range of biological processes that are either performed by or catalyzed by porphyrin containing proteins Chlorophyll containing photosynthetic reaction centers in plants for instance convert light energy into chemical energy while producing oxygen along the way It is this oxygen evolved from photosynthesis that is transported stored and reduced by heme containing proteins in many organisms including mammals Not surprisingly therefore these molecules remain of fundamental interest to chemists and biochemists Indeed they continue to be intensely investigated by researchers world wide Inspired by the importance of the porphyrins a new research di Progress in Inorganic Chemistry, Volume 56 Kenneth D. Karlin, 2009-02-23 This series provides inorganic chemists and materials scientists with a forum for critical authoritative evaluations of advances in every area of the discipline Volume 56 continues to report recent advances with a significant up to date selection of contributions by internationally recognized researchers Topics in Stereochemistry, Volume 25 Scott E. Denmark, Jay A. Siegel, 2006-05-05 Diese Reihe zur Stereochemie wendet sich an fortgeschrittene Studenten und praktisch t tige Naturwissenschaftler in erster Linie organische Chemiker mit Interesse an Fragen der Physikochemie und Molek lphysik Themen sind vielf ltige Aspekte der Stereochemie der r umlichen Anordnung organischer und biologischer Molek le sowie die Auswirkungen der Orientierung auf die Eigenschaften der Verbindungen Colorants for Non-Textile Applications H.S. Freeman, A.T. Peters, 2000-05-03 This volume examines the chemistry of natural and synthetic dyes produced for non textile markets where much new basic research in color chemistry is now taking place The first group of chapters covers the design synthesis properties and application technology pertaining to dyes for digital printing and photography The reader will be pleased with the breadth and depth of information presented in each case Of particular interest is the discussion of strategies for the design of dyes in these categories with emphasis on enhancing technical properties In view of certain new developments the ink jet chapter includes results from studies pertaining to dyes for textiles The three chapters comprising Section II of this volume cover the broad subject of dyes for food drug and cosmetic applications and then provide an in depth look at dyes for biomedical applications and molecular recognition The chapter on dyes for molecular recognition places emphasis on applications in the biological sciences including sensory materials and artificial receptors While the former two topics have been covered elsewhere in the past the present chapters are unequalled in scope Section III provides an in depth review of the design of laser dyes and dye based functional materials In the first of the two chapters the major principles of laser operation are summarized This is followed by a discussion of spectroscopic properties such as activation and deactivation of absorbed light by laser dyes Approaches to the development

of new laser dyes are presented The second chapter pertains to the synthesis of dicyanopyrazine based multifunctional dyes The visible and fluorescence spectra of these dyes in solution and the solid state are correlated with their three dimensional molecular structures Molecular stacking behavior and solid state properties of these multifunctional dye materials are presented The final group of chapters pertains to natural dyes and dyes for natural substrates In recent years the impression among certain consumers that natural is better safer has generated much interest in the use of natural dyes rather than synthetics This has led to a few short discussion papers in which the environmental advantages to using natural dyes have been questioned The initial chapter in this group provides both a historical look at natural dyes and a comprehensive compilation of natural dye structures and their sources Though natural dyes are of interest as colorants for textiles selected ones are used primarily in food and cosmetics Chapter ten provides an update on the author's previous reviews of structure color relationships among precursors employed in the coloration of hair Chemical constitutions characterizing hair dye structures are presented along with a summary of available precursors and their environmental properties Similarly the chapter on leather dyes covers constitutions and nomenclature in addition to providing interesting perspectives on the origin and use of leather the dyeing of leather and key environmental issues This volume is concluded with another look at colors in nature In this case rather than revisiting colors in plant life an interesting chapter dealing with color in the absence of colorants is presented Chapter twelve covers basic concepts of color science and illustrates how 3 D assemblies leading to a plethora of colors are handled in nature It is our hope that this atypical color chemistry chapter will invoke ideas that lead to the design of useful colorants The chapters presented in this volume demonstrate that color chemistry still has much to offer individuals with inquiring minds who are searching for a career path This work highlights the creativity of today's color chemists and the wide variety of interesting non textile areas from which a career can be launched

Supramolecular Chemistry of Anions Antonio Bianchi, Kristin Bowman-James, Enrique García-España, 1997-01-31 Despite the central role anionic species have been shown to play in both

mineralogical and biological processes until now there have been no comprehensive references dealing exclusively with anionic coordination chemistry Written by a group comprising pioneering researchers from the United States and Europe Supramolecular Chemistry of Anions covers all theoretical and practical aspects of anion complexation from thermodynamics and structure to catalysis and various applications The authors begin with the 1967 discovery of halide inclusion by bicyclic diammonium receptors and trace the development of anion coordination chemistry through the most recent developments in the field Topics covered in detail include Pre supramolecular anion chemistry Natural and artificial molecules that can act as anion receptors Preorganization and chemical design Structural thermodynamic electrochemical and photochemical aspects of anion coordination Computer methods for receptor design and multiple host guest relations Anion receptor catalysis and molecular recognition and transformation of nucleotides Supramolecular Chemistry of Anions is a valuable professional resource for organic and inorganic chemists analytical chemists biotechnologists pharmaceutical scientists and environmental chemists It also serves as an excellent graduate level text for students of molecular recognition catalysis and biomimetic chemistry
