Progressive Furnace Heating Alfred G. King, 2015-07-28 Excerpt from *Progressive Furnace Heating A Practical Manual of Designing Estimating and Installing Modern Systems for Heating and Ventilating Buildings With Warm Air* If you want to ventilate your room to warm it and open the bottom aperture you will succeed in both because the fresh air will be the warmest and will not stop until it comes in contact with the ceiling where spreading out in a level strata over the whole ceiling it will keep its relative position to the whole body until it reaches the bottom and passes out through the aperture. If we want to ventilate our room to cool it we must let the air out at or near the top. About the Publisher: Forgotten Books publishes hundreds of thousands of rare and classic books.
