Advanced Linear Algebra: With An Introduction To Module Theory Shou-te Chang, 2024-01-24 Certain essential concepts in linear algebra cannot be fully explained in a first course This is due to a lack of algebraic background for most beginning students On the other hand these concepts are taken for granted in most of the mathematical courses at graduate school level This book will provide a gentle guidance for motivated students to fill the gap It is not easy to find other books fulfilling this purpose This book is a suitable textbook for a higher undergraduate course as well as for a graduate student s self study The introduction of set theory and modules would be of particular interest to students who aspire to becoming algebraists There are three parts to this book One is to complete the discussion of bases and dimension in linear algebra In a first course only the finite dimensional vector spaces are treated and in most textbooks it will assume the scalar field is the real number field In this book the general case of arbitrary dimension and arbitrary scalar fields is examined To do so an introduction to cardinality and Zorn s lemma in set theory is presented in detail The second part is to complete the proof of canonical forms for linear endomorphisms and matrices For this a generalization of vector spaces and the most fundamental results regarding modules are introduced to readers This will provide the natural entrance into a full understanding of matrices Finally tensor products of vector spaces and modules are briefly discussed
