With e-commerce reshaping how products and services are sold and digital marketing redefining how brands connect with consumers, this book delivers a well-rounded practical education in both domains. Among the issues and topics covered are the following: the CJEU's interpretation of EU copyright law and application of fundamental rights, authorship and ownership of copyright protection of computer programs and databases, scope of exclusive rights such as communication to the public and distribution, including rental and lending, application of limitations and exceptions, cross border access to online content services, digital exhaustion of copyright and enforcement of copyright and cross border issues. With its practical approach to the substance of the various legal rules and principles both at EU level and in the various EU Member States, the book clearly describes in detail how copyright law functions throughout the EU. Professionals, business entities and academics who must be familiar with this dynamic legal area, especially in the digital environment, will benefit greatly from the book's clear consideration of legal questions that arise in connection with copyright issues.

[Computational Engineering of Historical Memories](#) Andrea Nanetti, 2022-09-26 Nanetti outlines a methodology for deploying artificial intelligence and machine learning to enhance historical research. Historical events are the treasure of human experiences, the heritage that societies have used to remain resilient and express their identities. Nanetti has created and developed an interdisciplinary methodology supported by practice based research that serves as a pathway between historical and computer sciences to design and build computational structures that analyse how societies create narratives about historical events. This consilience pathway aims to make historical memory machine understandable. It turns history into a computational discipline through an interdisciplinary blend of philological accuracy, historical scholarship, history based media projects and computational tools. Nanetti presents the theory behind this methodology from a humanities perspective and discusses its practical application in user interface and experience.
