Absorbent Technology P.K. Chatterjee,B.S. Gupta,2002-03-20 This publication discusses the theoretical aspects of absorbency as well as the structure properties and performance of materials The chapters are arranged in an approach for the reader to advance progressively through fundamental theories of absorbency to more practical aspects of the technology Topics covered include scientific principles of absorbency and structure property relationships material technology including super absorbents non woven natural and synthetic fibres and surfactants absorbency measurement techniques and technology perspective The reader is provided with current status information on technology and is also informed on important developments within the field

Absorbent Polymer Technology L. Brannon-Peppas,R.S. Harland,2012-12-02 In recent years there has been a veritable explosion of research and development in consumer oriented fields that utilize polymeric materials which absorb large amounts of water These fields encompass the preparation characterization and commercialization of separation systems pharmaceutical and personal care products such as infant diapers feminine products incontinence products and many other related areas The polymeric materials utilized in these applications are known as absorbent or superabsorbent materials because of their ability to swell rapidly and to retain large volumes of water urine and other biological fluids The aim of this book is to introduce the fundamentals of polymer structure and swelling as related to polymers used for these superabsorbent materials In the field of absorbence particular attention is given to crosslinked structures which swell to more than fifty times their initial weight in water or electrolytic solutions The book also provides descriptions of novel applications of superabsorbent materials as well as a detailed analysis of water transport in crosslinked polymers Absorbent Polymer Technology should be of interest to chemists polymer scientists chemical engineers and industrial scientists working with swellable polymeric systems in personal care pharmaceutical agricultural waste treatment and separation industries

Modern Superabsorbent Polymer Technology Fredric L. Buchholz,Andrew T. Graham,1998 A thorough up to date examination of the science and practical application of superabsorbent polymers Modern Superabsorbent Polymer Technology takes a comprehensive look at the structure properties and uses of superabsorbent polymers Prepared by editors with over 20 years of experience in the field it offers a unified approach to polymer science technologies and examines the key interrelationships between structure properties behavior and applications This book draws on the best and most relevant scientific papers from academia and industry as well as numerous patents and patent applications The result is a compact centralized source of information on superabsorbent polymers that no polymer or chemical engineer will want to be without Discusses synthetic chemistry and the effects of synthesis on the structure of superabsorbent polymers Describes and compares industrial practices of the major manufacturers of superabsorbent polymers Features analytical methods for evaluation of the properties and behavior of superabsorbent polymers Explores structural and property relationships of crosslinked super absorbent polymers Surveys new superabsorbent polymer forms

and types including fibers foams and biodegradable superabsorbents Covers current and emerging applications in personal care products horticulture construction and other areas **Principles of Modified-Atmosphere and Sous Vide Product Packaging** Jeffrey M. Farber, Karen Dodds, 2018-12-19 This is the first in depth presentation in book form of both modified atmosphere and sous vide food preservation and packaging technologies and applications The use of these technologies with all applicable food product categories is examined The authors are specialists in these preservation packaging methods from North America and Europe All significant aspects are examined including processes and materials applications microbiological control and regulations and guidelines Topics of special interest include use of hurdles HACCP gas absorbents and generators and time temperature indicators Extensive practical reference data is economically presented in tables

Active Food Packaging M.L. Rooney, 2012-12-06 Food packaging materials have traditionally been chosen to avoid unwanted interactions with the food During the past two decades a wide variety of packaging materials have been devised or developed to interact with the food These packaging materials which are designed to perform some desired role other than to provide an inert barrier to outside influences are termed active packaging The benefits of active packaging are based on both chemical and physical effects Active packaging concepts have often been presented to the food industry with few supporting results of background research This manner of introduction has led to substantial uncertainty by potential users because claims have sometimes been based on extrapolation from what little proven information is available The forms of active packaging have been chosen to respond to various food properties which are often unrelated to one another For instance many packaging requirements for post harvest horticultural produce are quite different from those for most processed foods The object of this book is to introduce and consolidate information upon which active packaging concepts are based Scientists technologists students and regulators will find here the basis of those active packaging materials which are either commercial or proposed The book should assist the inquirer to understand how other concepts might be applied or where they should be rejected
