Accelerated C++ Andrew

Koenig, Barbara E. Moo, 2018-12-17 **Accelerated C++** Ralph Olson, 2014-12-04 C pronounced cee plus plus is a general purpose programming language. It has imperative, object-oriented and generic programming features while also providing the facilities for low-level memory manipulation. It is designed with a bias for systems programming e.g. embedded systems, operating system kernels, with performance, efficiency and flexibility of use as its design requirements. C has also been found useful in many other contexts including desktop applications, servers e.g. e-commerce, web search, SQL performance-critical applications e.g. telephone switches, space probes and entertainment software such as video games. It is a compiled language with implementations of it available on many platforms. Various organizations provide them including the FSF, LLVM, Microsoft and Intel. C is standardised by the International Organization for Standardization (ISO) which the latest and current having been ratified and published by ISO in September 2011 as ISO/IEC 14882:2011 informally known as C 11. The C programming language was initially standardised in 1998 as ISO/IEC 14882:1998 which was then amended by the C 03 ISO/IEC 14882:2003 standard. The current standard C 11 supersedes these with new features and an enlarged standard library. Before standardization 1989 onwards C was developed by Bjarne Stroustrup at Bell Labs starting in 1979 who wanted an efficient, flexible language like C that also provided high-level features for program organization. Many other programming languages have been influenced by C including C, Java and newer versions of C after 1998.
