## Student Exploration: Circuits

**Vocabulary:** ammeter, circuit, current, electron, ohmmeter, Ohm's law, parallel circuit, resistance, resistor, series circuit, voltage

**Prior Knowledge Questions** (Do these BEFORE using the Gizmo.)

Strings of holiday lights can be designed in one of two ways. In some strings of lights, each light is connected to the others along a single wire (in series). In others, each light is attached to its own wire (in parallel).

1. Suppose a single light bulb burns out. How do you think this will affect lights that are strung along a single wire? *Since all lights in a series are connected to one wire, the lights would not work properly.*
2. How will a single burned-out bulb affect the string of lights if each light is attached to its own wire? *Since each light has its own wire, the other lights will work fine.*

**Gizmo Warm-up**

The Circuits Gizmo shows a circuit board and a variety of components. Create a **circuit** with a battery, a light switch, a wire, and a light bulb, as shown. (Click the light switch to turn it to **OFF**.)

1. Click the light switch to turn it to **ON**. What happens? *The light bulb turns on due to the flow of electricity passing through.*

2. Turn on **Show current** and select **Electron flow**. The moving dots represent a **current of electrons**—tiny, negatively charged particles—moving through the wire. **Voltage** is a measure of how much more potential energy an electron at one end of a battery has than an electron at the other end of the battery.
  - A. How does changing the battery's voltage affect the current? *Changing the voltage of the battery will have a direct impact on the current.*
  - B. How does changing the battery's voltage affect the brightness of the light? *Changing the battery's voltage will have a direct impact on the light bulb's brightness.*
3. Remove the wire. What happens? *Removing the wire disrupts the current and turns off the light.*
