*Scientific Computing and Algorithms in Industrial Simulations* Michael Griebel, Anton Schüller, Marc Alexander Schweitzer, 2017-10-30 The contributions gathered here provide an overview of current research projects and selected software products of the Fraunhofer Institute for Algorithms and Scientific Computing SCAI They show the wide range of challenges that scientific computing currently faces the solutions it offers and its important role in developing applications for industry Given the exciting field of applied collaborative research and development it discusses the book will appeal to scientists practitioners and students alike The Fraunhofer Institute for Algorithms and Scientific Computing SCAI combines excellent research and application oriented development to provide added value for our partners SCAI develops numerical techniques parallel algorithms and specialized software tools to support and optimize industrial simulations Moreover it implements custom software solutions for production and logistics and offers calculations on high performance computers Its services and products are based on state of the art methods from applied mathematics and information technology

**Pulmonary Drug Delivery Systems: Material and Technological Advances** Piyush Pradeep Mehta, Vividha Dhapte -Pawar, 2023-06-19 This book provides an insight into state of art developments in pulmonary drug delivery systems It comprises several chapters covering a wide range of promising technologies and novel materials explored for developing effective pulmonary drug delivery systems The initial book chapters elucidate role of thin film freezing supercritical fluid technology nano in micro particles system crystal engineered microstructures and porous particles in pulmonary drug delivery The subsequent book chapters elaborate on various functional excipients such as chitosan cyclodextrins and Vitamin E TPGS to attain local and systemic therapeutic action There are book chapters focused on diverse novel carrier systems such as hydrogels quantum dots metal organic framework and prodrug approach Additionally book also contains chapters exclusively dedicated to biologicals and numerical simulation in pulmonary therapeutics The book chapters follow a sequential order beginning with the pulmonary relevance of technology or polymeric materials carrier synthesis schemes current technical state of art along with clinical industrial and regulatory aspects Each chapter contains a future perspective section that will systematically reflect the current state of advances in pulmonary drug delivery It also offers a practical basis for audience to understand the design and function of the delivery systems for better therapeutic outcomes The book provides balanced views by considering the investigations from various scientific domains and industrial knowledge Briefly this book aims to collect analyse and bring together the latest developments in pulmonary drug delivery with more focus on materials and technologies Indeed this book is a valuable source for readers and researchers who wish to learn more about the advances in pulmonary drug delivery systems Numerical and experimental investigations of distribution of gaseous emissions with the air flow in the indoor environment Umer Afzal, 2017 There are many sources of emissions produced by burning fuel for power or heat through chemical reactions and from leaks from industrial processes or equipment There is

always a possibility of a potential hazard when these gases enter into the indoor environment with the air flow The determination of the concentration profiles are necessary to evaluate the potential hazard posed by the gas spread The main objectives of this work are to develop an appropriate measurement methodology and a 3D CFD transient multicomponent simulation model for the determination of spatial and temporal distribution of gaseous emissions with the air flow in the indoor environment This work is also aimed at comparing the numerical simulation results of different CFD programs for a 2D base case model of indoor air flow with and without emission source under laminar and turbulent flow conditions for the purpose of developing a better basic understanding of the physical phenomena and for the selection of the suitable and appropriate CFD program for the further development of the simulation model One of the goals is also to apply the developed simulation model to the loss prevention and risk mitigation in the indoor environment and to study the influence of different parameters on the concentration distribution of gaseous pollutants in the presence of air flow in the indoor environment to minimize the expensive and time consuming experimentation efforts
