enviBUILD 2014 Miloš Kalousek, Miroslav Čekon, 2014-10-27 Selected peer reviewed papers from the 9th International enviBUILD 2014 Conference September 18 19 2014 Brno Czech Republic **Advances in Hydraulic and Pneumatic Drives and Control, Centrifugal Pumps, Valves, and Seals 2025** Jarosław Stryczek, Urszula Warzyńska, Michał Banaś, 2025-10-17 This book reports on cutting edge research and technical achievements in the field of hydraulic drives The chapters selected from contributions presented at the 21st International Scientific Technical Conference on Hydraulic and Pneumatic Drives and Control Centrifugal Pumps Valves and Seals NSHP 2025 held on October 8 10 2025 in Karpacz Poland cover a wide range of topics such as theoretical advances in hydraulics pneumatics and control fluid dynamics diagnostics and simulation and energy aspects and applications Further topics include design and performance aspects of pumps and rotary systems sealing elements and connections and new materials and their properties in improving the efficiency of hydraulic components **Modeling and Practice of Erosion and Sediment Transport under Change** Mohamed Meddi, Gil Mahé, Hafzullah Aksoy, 2019-09-17 Climate and anthropogenic changes impact the conditions of erosion and sediment transport in rivers Rainfall variability and in many places the increase of rainfall intensity have a direct impact on rainfall erosivity Increasing changes in demography have led to the acceleration of land cover changes in natural areas as well as in cultivated areas and sometimes in degraded areas and desertified landscapes These anthropogenized landscapes are more sensitive to erosion On the other hand the increase in the number of dams in watersheds traps a great portion of sediment fluxes which do not reach the sea in the same amount nor at the same quality with consequences on coastal geomorphodynamics This book is dedicated to studies on sediment fluxes from continental areas to coastal areas as well as observation modeling and impact analysis at different scales from watershed slopes to the outputs of large river basins This book is concentrated on a number of keywords erosion and sediment transport model and practice and change The keywords are briefly discussed with respect to the relevant literature The contributions in this book address observations and models based on laboratory and field data allowing researchers to make use of such resources in practice under changing conditions

Vibrations and Stability of Complex Beam Systems Vladimir Stojanović, Predrag Kozić, 2015-02-07 This book reports on solved problems concerning vibrations and stability of complex beam systems The complexity of a system is considered from two points of view the complexity originating from the nature of the structure in the case of two or more elastically connected beams and the complexity derived from the dynamic behavior of the system in the case of a damaged single beam resulting from the harm done to its simple structure Furthermore the book describes the analytical derivation of equations of two or more elastically connected beams using four different theories Euler Rayleigh Timoshenko and Reddy Bickford It also reports on a new improved p version of the finite element method for geometrically nonlinear vibrations The new method provides more accurate approximations of solutions while also allowing us to analyze geometrically nonlinear vibrations The

book describes the appearance of longitudinal vibrations of damaged clamped beams as a result of discontinuity damage. It describes the cases of stability in detail employing all four theories and provides the readers with practical examples of stochastic stability. Overall, the book succeeds in collecting in one place theoretical analyses, mathematical modeling, and validation approaches based on various methods, thus providing the readers with a comprehensive toolkit for performing vibration analysis on complex beam systems. **ANSYS Workbench Tutorial Release 14** Kent L.
