## **And System Analysis Activate Learning Engineering:**

Connecting Adult Learning and Knowledge Management Monica Fedeli, Laura L. Bierema, 2019-11-25 This multidisciplinary book represents an initial attempt to connect adult learning and knowledge management in theory and practice. It provides educators, learners, and organizational development professionals with new strategies and resources for developing active and effective pedagogies which in turn prepare learners and practitioners to manage knowledge in organizations and higher education. To do so, it gathers contributions and case studies from a diverse global team of authors and provides a theoretical and practical outline of new strategies and methods for facilitating adult teaching and learning. It also provides a fresh reading of active learning methods by adopting a knowledge management viewpoint that is broadly applicable whether helping students master content in university courses or helping organizations learn and change. The book is divided into three main sections: a) methods and theories for adult teaching and learning; b) knowledge management in education; and c) case studies and best practices that consider classroom learning, higher education change, and organization development.

**Technology Supported Active Learning** Carlos Vaz de Carvalho, Merja Bauters, 2021-07-14 This book promotes student-centered approaches to the learning process, allowing students to develop skills and competences that traditional passive learning methods cannot foster. In turn, supporting active learning with digital technology tools creates new possibilities in terms of pedagogical design and implementation. This book addresses the latest research and practice in the use of technology to promote active learning. As such, on the one hand, it focuses on active pedagogical methodologies like problem-based learning, design thinking, and agile approaches; on the other, it presents best practice cases on the use of digital environments to support these methodologies. Readers will come to understand and learn to apply active learning methodologies either by replicating the best practices presented here or by creating their own methods.

Process Engineering Renewal 1 Éric Schaer, Jean-Claude André, 2020-04-09 Process engineering emerged at the beginning of the 20th Century and has become an essential scientific discipline for the matter and energy processing industries. Its success is incontrovertible with the exponential increase in techniques and innovations. Rapid advances in new technologies such as artificial intelligence, as well as current societal needs, sustainable development, climate change, renewable energy, the environment, are developments that must be taken into account in industrial renewal. *Process Engineering Renewal 1*, the first volume of three, focuses on training, demonstrating the need for innovation in order for the field to have a framework that is sustainable in a highly changeable world.
