## Under the Stars

Meg lies under the stars.  
She can see them well  
in the clear night sky.  
The stars shine  
bright white. Meg

are very old. She thinks they are pretty!

**T.P.'s Weekly** Thomas Power O'Connor, Holbrook Jackson, 1905      **Language, Form, and Logic** Peter Ludlow, Sašo Zivanović, 2022-02-24 This book takes an idea first explored by medieval logicians 800 years ago and revisits it armed with the tools of contemporary linguistics logic and computer science The idea the Holy Grail of the medieval logicians was the thought that all of logic could be reduced to two very simple rules that are sensitive to logical polarity for example the presence and absence of negations Ludlow and Zivanović pursue this idea and show how it has profound consequences for our understanding of the nature of human inferential capacities They also show its consequences for some of the deepest issues in contemporary linguistics including the nature of quantification puzzles about discourse anaphora and pragmatics and even insights into the source of aboutness in natural language The key to their enterprise is a formal relation they call p scope a polarity sensitive relation that controls the operations that can be carried out in their Dynamic Deductive System They show that with p scope in play deductions can be carried out using sublogical operations like those they call COPY and PRUNE operations that are simple syntactic operations on sentences They prove that the resulting deductive system is complete and sound The result is a beautiful formal tapestry in which p scope unlocks important properties of natural language including the property of restrictedness which they prove to be equivalent to the semantic notion of conservativity More than that they show that restrictedness is also a key to understanding quantification and discourse anaphora and many other linguistic phenomena      **Tools and Algorithms for the Construction and Analysis of Systems** Nicolas Halbwachs, Lenore Zuck, 2005-02-26 ETAPS 2005 was the eighth instance of the European Joint Conferences on Theory and Practice of Software ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences This year it comprised five conferences CC ESOP FASE FOSSACS TACAS 17 satellite workshops AVIS BYTECODE CEES CLASE CMSB COCV FAC FESCA FINCO GCW DSE GLPL LDTA QAPL SC SLAP TGC UITP seven invited lectures not including those that were specific to the satellite events and several tutorials We received over 550 submissions to the five conferences this year giving acceptance rates below 30% for each one Congratulations to all the authors who made it to the final program I hope that most of the other authors still found a way of participating in this exciting event and I hope you will continue submitting The events that comprise ETAPS address various aspects of the system development process including specification design implementation analysis and improvement The languages methodologies and tools which support these activities are all well within its scope Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on the one hand and soundly based practice on the other Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive      **R.
