Cornils,Bob Murphy,2002 Author Bob Murphy offers many startling propositions in his revolutionary new book such as The basic molecules necessary for life to begin on Earth came from somewhere other than this planet and the main cause of chronic disease related to aging is the inability of human cells to efficiently deal with oxygen The basic premise of this revolutionary new book is that the original animal cells evolved in an atmosphere largely deficient in oxygen and thus our ability to deal with this very reactive element is flawed In order to survive in an atmosphere that gradually acquired more and more oxygen our human ancestral cells enlisted the help of the mitochondrion which to this day live within our cells However in the process of metabolizing oxygen the mitochondrion are easily damaged This damage known as oxidant stress along with atherosclerosis can lead to depression of cellular function and even cellular death which in turn can lead to degenerative disease Written for the Baby Boomers because of that generation s characterization as a youth culture but also for anyone

with an interest in the problems associated with aging Baby Boomers Guide to Healthy Aging explains the principal factors leading to the development of degenerative diseases such as heart disease osteoporosis cancer and dementia The book encourages the reader to take preventative lifestyle and dietary measures and offers practical suggestions on how to maintain good health as one gets older Baby Boomers Guide to Healthy Aging is supported by articles from approximately 5 000 scientific journals This interesting and important health book is a must for the average reader the clinician and the scientist alike Bob Murphy is a physiologist and psychologist He lives with his family in Sydney Australia where he is currently writing a second book that explores the spiritual and psychological aspects of good health and well being *Baby*
