[Algorithm Design](#) Jon Kleinberg, Éva Tardos, 2013-07-30 August 6 2009 Author Jon Kleinberg was recently cited in the New York Times for his statistical analysis research in the Internet age. Algorithm Design introduces algorithms by looking at the real world problems that motivate them. The book teaches students a range of design and analysis techniques for problems that arise in computing applications. The text encourages an understanding of the algorithm design process and an appreciation of the role of algorithms in the broader field of computer science.

[Algorithm Design: A Methodological Approach - 150 problems and detailed solutions](#) Patrick Bosc, Marc Guyomard, Laurent Miclet, 2023-01-31 A bestseller in its French edition, this book is original in its construction and its success in the French market demonstrates its appeal. It is based on three principles: 1. An organization of the chapters by families of algorithms: exhaustive search, divide and conquer, etc. On the contrary, there is no chapter devoted only to a systematic exposure of say algorithms on strings. Some of these will be found in different chapters. 2. For each family of algorithms, an introduction is given to the mathematical principles and the issues of a rigorous design with one or two pedagogical examples. 3. For the most part, the book details 150 problems spanning seven families of algorithms. For each problem, a precise and progressive statement is given. More importantly, a complete solution is detailed with respect to the design principles that have been presented: often, some classical errors are pointed out. Roughly speaking, two thirds of the book is devoted to the detailed rational construction of the solutions.

**Artificial Neural Nets and Genetic Algorithms** George D. Smith,Nigel C. Steele,1998 This is the third in a series of conferences devoted primarily to the theory and applications of artificial neural networks and genetic algorithms The first such event was held in Innsbruck Austria in April 1993 the second in Ales France in April 1995 We are pleased to host the 1997 event in the mediaeval city of Norwich England and to carryon the fine tradition set by its predecessors of providing a relaxed and stimulating environment for both established and emerging researchers working in these and other related fields This series of conferences is unique in recognising the relation between the two main themes of artificial neural networks and genetic algorithms each having its origin in a natural process fundamental to life on earth and each now well established as a paradigm fundamental to continuing technological development through the solution of complex industrial commercial and financial problems This is well illustrated in this volume by the numerous applications of both paradigms to new and challenging problems The third key theme of the series therefore is the integration of both technologies either through the use of the genetic algorithm to construct the most effective network architecture for the problem in hand or more recently the use of neural networks as approximate fitness functions for a genetic algorithm searching for good solutions in an incomplete solution space i e one for which the fitness is not easily established for every possible solution instance
