Dr. H. Panda, 2024-01-01 Electroplating and Electrochemicals industries shimmering with growth and profitability potential are truly riveting. Electroplating, an intricate process, involves the electrodeposition of a svelte metallic stratum onto diverse substrates utilizing electric currents. This technique entails submerging the intended object, the substrate, into an electrolytic bath brimming with metal ions and through the application of an electric current, achieves a homogeneous metallic veneer. Conversely, Electrochemicals are birthed from electrochemical reactions. These intricate reactions are characterized by the transference of electrons among distinct compounds within an electrolytic milieu. Through the deliberate orchestration of electron flow, a plethora of chemical reactions are catalyzed, culminating in the synthesis of targeted chemicals. This methodology finds its application across a spectrum of industries encompassing pharmaceuticals, agriculture, and energy storage sectors. The global electroplating market is expected to grow at a CAGR of 5.5%. The growth in the market can be attributed to the increasing demand for electroplated products from various end-use industries such as automotive, electrical, electronics, aerospace, defense, Jewellery, and machinery parts components. In addition, the growing awareness about corrosion protection and decorative finishes is also propelling the growth of this market. This book contains in-depth information about Electrochemical Processing, Metal Surface Treatment, Electroless Plating, Electroplating, Electroplating of Aluminium, Cadmium, Chromium, Cobalt, Copper, Gold, Iron, Lead, Nickel, Bright Nickel, Silver, Alloy, Platinum, Palladium, Rhodium, Bright Zinc, Tin, Plastics, Barrel, Zinc, Electroplating, Brightener, Metal Treatments, Electrodeposition of Precious Metals, Electropolishing of Stainless Steel, Case Hardening, Electroless Coating of Gold, Silver, Buffing, and Industrial Metal Polishing Compounds. Aluminium, Gold, and Its Compounds, Complex Salts of Copper, Silver, and Gold, Hydrides of Silicon, Chemical and Electrochemical Conversion Treatments, and Electrostatic Sealing. This book is an invaluable resource that comprehensively addresses all the essential topics in Electroplating and Electrochemicals. It is poised to become a standard reference for professionals and entrepreneurs interested in this field, offering a comprehensive understanding of Electroplating. Additionally, it will prove highly beneficial to consultants, new entrepreneurs, technocrats, research scholars, libraries, and existing businesses. The book offers a detailed roadmap that guides readers from the initial concept to the machinery acquisition phase.

Epoxy Resins Technology Handbook (Manufacturing Process, Synthesis, Epoxy Resin Adhesives and Epoxy Coatings) 2nd Revised Edition. Dr. H. Panda,2019-04-19 Epoxy is a term used to denote both the basic components and the cured end products of epoxy resins as well as a colloquial name for the epoxide functional group Epoxy resin are a class of thermoset materials used extensively in structural and specialty composite applications because they offer a unique combination of

properties that are unattainable with other thermoset resins. Epoxy resins are monomers or prepolymers that further reacts with curing agents to yield high performance thermosetting plastics. They have gained wide acceptance in protecting coatings, electrical and structural applications because of their exceptional combination of properties such as toughness, adhesion, chemical resistance and superior electrical properties. Epoxy resins are characterized by the presence of a three membered cycle ether group commonly referred to as an epoxy group (1,2-epoxide or oxirane). The most widely used epoxy resins are diglycidyl ethers of bisphenol A derived from bisphenol A and epichlorohydrin. The market of epoxy resins are growing day by day. Today the total business of this product is more than 100 crores. Epoxy resins are used for about 75% of wind blades currently produced worldwide while polyester resins account for the remaining 25%. A standard 1.5 MW megawatt wind turbine has approximately 10 tonnes of epoxy in its blades. Traditionally the markets for epoxy resins have been driven by demand generated primarily in areas of adhesives, building and civil construction, electrical insulation, printed circuit boards and protective coatings for consumer durables amongst others. The major contents of the book are synthesis and characteristics of epoxy resin, manufacture of epoxy resins, epoxide curing reactions, the dynamic mechanical properties of epoxy resins, physical and chemical properties of epoxy resins, epoxy resin adhesives, epoxy resin coatings, epoxy coating, give into water, electrical and electronic applications, analysis of epoxides and epoxy resins, and the toxicology of epoxy resins. It will be a standard reference book for professionals and entrepreneurs. Those who are interested in this field can find the complete information from manufacture to final uses of epoxy resin. This presentation will be very helpful to new entrepreneurs, technocrats, research scholars, libraries and existing units.
