Counting Surfaces Bertrand Eynard,2016-03-21

The problem of enumerating maps a map is a set of polygonal countries on a world of a certain topology not necessarily the plane or the sphere is an important problem in mathematics and physics and it has many applications ranging from statistical physics geometry particle physics telecommunications biology etc This problem has been studied by many communities of researchers mostly combinatorists probabilists and physicists Since 1978 physicists have invented a method called matrix models to address that problem and many results have been obtained Besides another important problem in mathematics and physics in particular string theory is to count Riemann surfaces Riemann surfaces of a given topology are parametrized by a finite number of real parameters called moduli and the moduli space is a finite dimensional compact manifold or orbifold of complicated topology The number of Riemann surfaces is the volume of that moduli space More generally an important problem in algebraic geometry is to characterize the moduli spaces by computing not only their volumes but also other characteristic numbers called intersection numbers Witten's conjecture which was first proved by Kontsevich was the assertion that Riemann surfaces can be obtained as limits of polygonal surfaces maps made of a very large number of very small polygons In other words the number of maps in a certain limit should give the intersection numbers of moduli spaces In this book we show how that limit takes place The goal of this book is to explain the matrix model method to show the main results obtained with it and to compare it with methods used in combinatorics bijective proofs Tutte's equations or algebraic geometry Mirzakhani's recursions The book intends to be self contained and accessible to graduate students and provides comprehensive proofs several examples and gives the general formula for the enumeration of maps on surfaces of any topology In the end the link with more general topics such as algebraic geometry string theory is discussed and in particular a proof of the Witten Kontsevich conjecture is provided

Quantum Many Body Systems Vincent Rivasseau, Robert Seiringer, Jan Philip Solovej, Thomas Spencer, 2012-06-25 The book is based on the lectures given at the CIME school Quantum many body systems held in the summer of 2010 It provides a tutorial introduction to recent advances in the mathematics of interacting systems written by four leading experts in the field V Rivasseau illustrates the applications of constructive Quantum Field Theory to 2D interacting electrons and their relation to quantum gravity R Seiringer describes a proof of Bose Einstein condensation in the Gross Pitaevski limit and explains the effects of rotating traps and the emergence of lattices of quantized vortices J P Solovej gives an introduction to the theory of quantum Coulomb systems and to the functional analytic methods used to prove their thermodynamic stability finally T Spencer explains the supersymmetric approach to Anderson localization and its relation to the theory of random matrices All the lectures are characterized by their mathematical rigor combined with physical insights

Quantum Theory from Small to Large Scales Jürg Frohlich, 2012-05-24 This book collects lecture courses and seminars given at the Les Houches Summer School 2010 on Quantum Theory From Small to Large Scales It reviews the state of the art developments in this field by touching on different research topics from an interdisciplinary perspective

**Log-Gases and Random Matrices (LMS-34)** Peter J. Forrester, 2010-07-01 Random matrix theory both as an application and as a theory has evolved rapidly over the past fifteen years Log Gases and Random Matrices gives a comprehensive account of these developments emphasizing log gases as a physical picture and heuristic as well as covering topics such as beta ensembles and Jack polynomials Peter Forrester presents an encyclopedic development of log gases and random matrices viewed as examples of integrable or exactly solvable systems Forrester develops not only the application and theory of Gaussian and circular ensembles of classical random matrix theory but also of the Laguerre and Jacobi ensembles and their beta extensions Prominence is given to the computation of a multitude of Jacobians determinantal point processes and orthogonal polynomials of one variable the Selberg integral Jack polynomials and generalized hypergeometric functions Painlevé transcendents macroscopic electrostatics and asymptotic formulas nonintersecting paths and models in statistical mechanics and applications of random matrix theory This is the first textbook development of both nonsymmetric and symmetric Jack polynomial theory as well as the connection between Selberg integral theory and beta ensembles The author provides hundreds of guided exercises and linked topics making Log Gases and Random Matrices an indispensable reference work as well as a learning resource for all students and researchers in the field *Mathematical Reviews* ,2007

*Canadian Journal of Physics* ,2014 **American Book Publishing Record** ,2002 *Sparse Grids and Applications* Jochen Garcke, Michael Griebel, 2012-10-13 In the recent decade there has been a growing interest in the numerical treatment of high dimensional problems It is well known that classical numerical discretization schemes fail in more than three or four dimensions due to the curse of dimensionality The technique of sparse grids helps overcome this problem to some extent under suitable regularity assumptions This discretization approach is obtained from a multi scale basis by a tensor product construction and subsequent truncation of the resulting multiresolution series expansion This volume of LNCSE is a collection of the papers from the proceedings of the workshop on sparse grids and its applications held in Bonn in May 2011 The selected articles present recent advances in the mathematical understanding and analysis of sparse grid discretization Aspects arising from applications are given particular attention **Nonlinearity** ,2009 *Encyclopedia of Mathematical Physics* Jean-Pierre Francoise, Gregory L.
