Metal-catalyzed Cross-coupling Reactions François Diederich, Peter J. Stang, 1998-02-11 Carbon carbon bond forming reactions are arguably the most important processes in chemistry as they represent key steps in the building of complex molecules from simple precursors Among these reactions metal catalyzed cross coupling reactions are extensively employed in a wide range of areas of preparative organic chemistry ranging from the synthesis of complex natural products to supramolecular chemistry and materials science In this work a dozen internationally renowned experts and leaders in the field bring the reader up to date by documenting and critically analyzing current developments and uses of metal catalyzed cross coupling reactions A particularly attractive and useful feature that enhances the practical value of this monograph is the inclusion of key synthetic protocols in experimental format chosen for broad utility and application This practice oriented book can offer the practitioner short cuts to ensure they remain up to date with the latest developments

Ni- and Fe-Based Cross-Coupling Reactions Arkaitz Correa, 2016-11-26 The series Topics in Current Chemistry Collections presents critical reviews from the journal Topics in Current Chemistry organized in topical volumes The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology medicine and materials science The goal of each thematic volume is to give the non specialist reader whether in academia or industry a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed The coverage is not intended to be an exhaustive summary of the field or include large quantities of data but should rather be conceptual concentrating on the methodological thinking that will allow the non specialist reader to understand the information presented Contributions also offer an outlook on potential future developments in the field

Cross-Coupling Reactions Norio Miyaura, 2003-07-01 In 1972 a very powerful catalytic cycle for carbon carbon bond formation was first discovered by the coupling reaction of Grignard reagents at the sp carbon Over the past 30 years the protocol has been substantially improved and expanded to other coupling reactions of Li B N O Al Si P S Cu Mn Zn In Sn and Hg compounds These reactions provided an indispensable and simple methodology for preparative organic chemists Due to the simplicity and reliability in the carbon carbon carbon heteroatom and carbon metalloids formations as well as high efficiency of the catalytic process the reactions have been widely employed by organic chemists in various fields Application of the protocol ranges from various syntheses of complex natural products to the preparation of biologically relevant molecules including drugs and of super molecules and to functional materials The reactions on solid surfaces allow robot synthesis and combinatorial synthesis Now many organic chemists do not hesitate to use transition metal complexes for the transformation of organic molecules Indeed innumerable organic

syntheses have been realized by the catalyzed reactions of transition metal complexes that are not achievable by traditional synthetic methods. Among these, the metal catalyzed cross coupling reactions have undoubtedly contributed greatly to the development of such a new area of metal catalyzed organic syntheses. An excellent monograph for the cross coupling reactions and other metal catalyzed C-C bond forming reactions recently appeared in *Metal catalyzed Cross coupling Reactions* Wiley VCH 1998. Cross-coupling Reactions Joffrey Vrijdag, 2020. *Cross Coupling Reactions: An Overview* opens with an overview of the fundamentals and applications of the young and fast developing area of transition metal catalyzed mediated oxidative dehydrogenative C-H/C-H coupling reactions between two heteroarenes. Continuing, the authors highlight the recent advances regarding the ligand supported transition metal catalyzed domino cascade or one pot syntheses of various heterocycles involving cross coupling reactions. The recent advances in Cu catalyzed tandem reactions for heterocycle synthesis are also addressed. Cu metal chemistry has garnered attention as a potential alternative to precious transition metals, being cheaper, more sustainable, and more easily available. A comprehensive account of research on green chemical routes is provided involving various palladium metal based catalysts utilized in facilitating cross coupling reactions in aqueous media. Reported decarboxylative cross coupling reactions are discussed along with suitable examples focusing on their mechanism of action.
