

EXPERIMENT NO. 1 (C)**AIM: VERIFICATION OF POLYGON LAW OF FORCES**

APPARATUS:- Gravesand's apparatus complete with two freely moving guide pulleys, weights, thread, a small central ring, white paper sheet, three scale pans, tape, a mirror strip, set squares and pencil.

THEORY: Polygon law of forces states that if a number of forces acting on a particle are represented in magnitude and direction by the sides of a polygon taken in the same order then their resultant is represented in magnitude and direction by the closing side of the polygon taken in the opposite direction.

**PROCEDURE:**

- I) Fix the paper sheet centrally on a board with the help of cello tape.
- II) Tie five segments of thread to form a knot and pass four of them over the guide pulleys as shown figure LW-4.
- III) Put four weights one each into the pans of the strings passing over the pulleys.
- IV) Attach a pan to the free end of the middle string and put weight into it.
- V) Adjust the weights in the pans in such a way that the knot comes in the center of paper and allows the system to come in the rest position.
- VI) Put the mirror under the threads turn by turn and mark the points by keeping the eye, the thread and its image in the same line without disturbing the system.
- VII) Write down the magnitude of forces in each string which will be the same as the corresponding weights.
