The Fitness of Information Chaomei Chen,2014-07-30 Theories and practices to assess critical information in a complex adaptive system Organized for readers to follow along easily The Fitness of Information Quantitative Assessments of Critical Evidence provides a structured outline of the key challenges in assessing crucial information in a complex adaptive system Illustrating a variety of computational and explanatory challenges the book demonstrates principles and practical implications of exploring and assessing the fitness of information in an extensible framework of adaptive landscapes The book's first three chapters introduce fundamental principles and practical examples in connection to the nature of aesthetics mental models and the subjectivity of evidence In particular the underlying question is how these issues can be addressed quantitatively not only computationally but also explanatorily The next chapter illustrates how one can reduce the level of complexity in understanding the structure and dynamics of scientific knowledge through the design and use of the CiteSpace system for visualizing and analyzing emerging trends in scientific literature The following two chapters

explain the concepts of structural variation and the fitness of information in a framework that builds on the idea of fitness landscape originally introduced to study population evolution The final chapter presents a dual map overlay technique and demonstrates how it supports a variety of analytic tasks for a new type of portfolio analysis The Fitness of Information Quantitative Assessments of Critical Evidence also features In depth case studies and examples that characterize far reaching concepts illustrate underlying principles and demonstrate profound challenges and complexities at various levels of analytic reasoning Wide ranging topics that underline the common theme from the subjectivity of evidence in criminal trials to detecting early signs of critical transitions and mechanisms behind radical patents An extensible and unifying framework for visual analytics by transforming analytic reasoning tasks to the assessment of critical evidence The Fitness of Information Quantitative Assessments of Critical Evidence is a suitable reference for researchers analysts and practitioners who are interested in analyzing evidence and making decisions with incomplete uncertain and even conflicting information The book is also an excellent textbook for upper undergraduate and graduate level courses on visual analytics information visualization and business analytics and decision support systems Applied Bayesian Modelling Peter Congdon,2014-05-23 This book provides an accessible approach to Bayesian computing and data analysis with an emphasis on the interpretation of real data sets Following in the tradition of the successful first edition this book aims to make a wide range of statistical modeling applications accessible using tested code that can be readily adapted to the reader's own applications The second edition has been thoroughly reworked and updated to take account of advances in the field A new set of worked examples is included The novel aspect of the first edition was the coverage of statistical modeling using WinBUGS and OPENBUGS This feature continues in the new edition along with examples using R to broaden appeal and for completeness of coverage

Econometrics Helmut Lütkepohl,Markus Krätzig,2004-08-02 Time series econometrics is a rapidly evolving field Particularly the cointegration revolution has had a substantial impact on applied analysis Hence no textbook has managed to cover the full range of methods in current use and explain how to proceed in applied domains This gap in the literature motivates the present volume The methods are sketched out reminding the reader of the ideas underlying them and giving sufficient background for empirical work The treatment can also be used as a textbook for a course on applied time series econometrics Topics include unit root and cointegration analysis structural vector autoregressions conditional heteroskedasticity and nonlinear and nonparametric time series models Crucial to empirical work is the software that is available for analysis New methodology is typically only gradually incorporated into existing software packages Therefore a flexible Java interface has been created allowing readers to replicate the applications and conduct their own analyses
