FOR PROFESSIONAL USE

#### 1. Introduction

Acrylic nails are a popular choice for many women who want to enhance their natural nails. This manual provides a comprehensive guide to the process, from preparation to application and maintenance.

Whether you are a beginner or an experienced technician, this manual will help you understand the correct techniques and safety protocols for acrylic nail application. It covers everything from client consultation to the final finish.

Remember, safety is always the top priority. Always use proper hygiene and sanitation practices to ensure the health and safety of your clients.

Acrylic nails are made from a combination of liquid monomer and powder polymer. The liquid monomer is applied first, followed by the powder polymer, which is then cured under a UV or LED light.

Remember, a well-manicured set of acrylic nails can last up to three weeks. Proper maintenance and care are essential to keep them looking their best.

#### How to choose the right acrylic system for your business

**Acrylic Liquid Monomer**  
This is the liquid part of the acrylic system. It is important to choose a high-quality liquid monomer that is free from harmful chemicals and has a long shelf life.

**Acrylic Powder**  
This is the powder part of the acrylic system. It should be chosen based on the desired finish and durability. Look for a powder that is easy to mix and apply.

**Acrylic Primer**  
This is used to prepare the natural nail for the acrylic application. It helps to remove any oils and creates a strong bond between the natural nail and the acrylic.

**Acrylic Top Coat**  
This is the final layer applied to the acrylic nails. It provides a glossy finish and protects the acrylic from chipping and peeling.

**1. Preparation** - Before applying acrylic, the technician must ensure the client's natural nails are clean, dry, and free from any polish or oils. The technician should also wear gloves and use proper sanitation techniques.

**2. Application** - The technician should apply a thin layer of liquid monomer to the natural nail, followed by a layer of powder polymer. The mixture should be applied in a smooth, even layer.

**3. Curing** - The acrylic should be cured under a UV or LED light. The curing time will vary depending on the brand of the acrylic system used.

#### Final Step

After the acrylic is cured, the technician should file the nails to the desired shape and length. The final step is to apply a top coat to protect the acrylic.

Remember, acrylic nails are a popular choice for many women. By following the steps in this manual, you can ensure that your clients are satisfied with the results.

Acrylic nails are a popular choice for many women who want to enhance their natural nails. This manual provides a comprehensive guide to the process, from preparation to application and maintenance.

Remember, safety is always the top priority. Always use proper hygiene and sanitation practices to ensure the health and safety of your clients.

#### Important Acrylic Nails Facts

Acrylic nails are made from a combination of liquid monomer and powder polymer. The liquid monomer is applied first, followed by the powder polymer, which is then cured under a UV or LED light.

Remember, a well-manicured set of acrylic nails can last up to three weeks. Proper maintenance and care are essential to keep them looking their best.
