

ACT Aspire Science Practice Questions

Students did 2 experiments to estimate the mass of water present in margarines and in hand lotions.

Experiment 1

The students measured out a 25 gram (g) sample of Margarine A in a glass beaker. The sample was heated until it completely melted. Upon cooling, a solid layer formed on top of a liquid water layer. A small hole was made in the solid layer, and the liquid water was poured out. The mass of solid remaining in the beaker was measured. Then, the mass of water in the margarine sample was calculated. The procedure was repeated for Margarines B, C, and D (see Table 1).

Table 1		
Margarine	Mass of solid remaining (g)	Mass of water in margarine sample (g)
A	24	1
B	13	12
C	19	6
D	11	14

Experiment 2

The students measured out a 25 g sample of Lotion E in a glass beaker. The sample was heated to boiling and then allowed to gently boil for 30 minutes. After the mixture cooled to room temperature, the mass of lotion remaining in the beaker was measured. Then, the mass of water in the lotion sample was calculated. The procedure was repeated for Lotions F, G, and H (see Table 2).
