

# Time Domain Reflectometer (Tdr)

- Time Domain Reflectometers (TDRs) are diagnostic tools used to identify faults in transmission lines such as coaxial cables and optical fibers
- They work by sending an electrical pulse down the line and analyzing the reflected signals
- TDRs are pivotal in industries like telecommunications, power, aviation, and industrial automation
- While they offer non-destructive testing and high accuracy, TDRs have limitations like minimum detectable fault and can be influenced by cable characteristics
- Choosing the appropriate TDR ensures efficient fault detection across various applications
