Prices and Quantities Rakesh V. Vohra, 2020-02-20 Rakesh V Vohra offers a unique approach to studying and understanding intermediate microeconomics by reversing the conventional order of treatment starting with topics that are mathematically simpler and progressing to the more complex. The book begins with monopoly which requires single variable rather than multivariable calculus and allows students to focus clearly on the fundamental trade off at the heart of economics: margin versus volume. Imperfect competition and the contrast with monopoly follows introducing the notion of Nash equilibrium. Perfect competition is addressed toward the end of the book and framed as a model of non strategic behavior by firms and agents. The last chapter is devoted to externalities with an emphasis on how one might design competitive markets to price externalities and linking the difficulties to the problem of efficient provision of public goods. Real life examples engage the reader while encouraging them to think critically about the interplay between model and reality. *The Transformed Library* Jeannette Woodward, 2013 Are libraries extinct? In these times of economic downturn and digital availability, what could provide libraries with a reason for being? In order to provide a vital presence on Facebook and Google, you must provide a true sense of connection with the library's friends.
