Ambient Intelligence Ambient Intelligence:

Agents and Ambient Intelligence T. Bosse, 2012-05-10 The concept of an intelligent agent a computational system capable of performing certain tasks autonomously derived from the growing potential of digital computers in the mid 20th century and had been widely adopted by the early 1990s Partly in parallel with this concept the perspective of ambient intelligence AmI emerged in the late 1990s Agent technology and AmI have many similarities and the main purpose of this book is to provide an overview of the state of the art of the scientific area that integrates these two The book addresses a wide variety of topics related to agents and AmI including theoretical practical design implementation ethical and philosophical issues The 12 chapters are arranged in four sections The first consists of three chapters discussing ethical and philosophical issues the second part explores various approaches that can be used to develop agent based AmI Systems the third part contains three chapters that share the goal to endow AmI systems with useful properties like intelligence and adaptivity and the last section presents concrete applications of agent based AmI systems This book provides an insight into recent achievements and future challenges at the intersection of agent technology and ambient intelligence and will assist the development of more intelligent flexible effective and user friendly systems as well as posing critical questions about the future of the role of agents within the AmI perspective

Ambient Intelligence Giuseppe Riva, 2005 The metaphor of Ambient Intelligence AmI tries to picture a vision of the future where all of us will be surrounded by intelligent electronic environments and this ambient has claims to being sensitive and responsive to our needs Ambient Intelligence without invasion of privacy represents a long term vision for the EU Information Society Technologies Research programme A strong multi disciplinary and collaborative approach is a key requirement for large scale technology innovation and the development of effective applications Up to now most of the books and papers related to AmI focus their analysis on the technology potential only An important feature of this volume is the link between the technology through the concepts of ubiquitous computing and intelligent interface and the human experience of interacting in the world through a neuro psychological vision centred on the concept of presence Presence the sense of being there is the experience of projecting one's mind through media to other places people and designed environments The combination of recent discoveries in cognitive neuroscience which make it possible to acquire a better understanding of the human aspects of presence and the breakthroughs at the level of the enabling technologies make it increasingly possible to build novel systems based on this understanding The goal of this volume is to assess the technologies and processes that are behind the AmI vision in order to help the development of state of the art applications More in detail this volume aims at supporting researchers and scientists interested in the understanding and exploiting the potential of AmI

Advances in Ambient Intelligence Juan Carlos Augusto, Daniel Shapiro, 2007 Ambient Intelligence lies at the confluence of several trends the continued decrease in cost and size of computing technology the increasing availability of networking and communication infrastructure the growing public

familiarity comfort with computing artifacts and practical advances in artificial intelligence These developments make it possible to contemplate the ubiquitous deployment of intelligent systems prototypically in smart homes but more broadly in public spaces private automobiles and on individual appliances and hand held devices in applications ranging from entertainment through eldercare to safety critical device control Ambient Intelligence is a young field As a result it has been natural to wonder what the technology can do to improve the way we live At the same time it is becoming increasingly important to ask What do we want since the intent is to embed technology in new and pervasive ways The contributions in this volume provide a window into the visions and trends currently dominating the area of Ambient Intelligence This publication is divided into three sections The first describes visions for the future of Ambient Intelligence the second addresses core technology of the field and the third provides an analysis of elements of the area which will demand special consideration during the future development of the area

Many difficult scientific discovery tasks can only be solved in interactive ways by combining intelligent computing techniques with intuitive and adaptive user interfaces. It is inevitable to use human intelligence in scientific discovery systems: human eyes can capture complex patterns and relationships along with detecting the exceptional cases in a data set; the human brain can easily manipulate perceptions to make decisions. Ambient intelligence

is about this kind of ubiquitous and autonomous human interaction with information Scientific discovery is a process of creative perception and communication dealing with questions like how do we significantly reduce information while maintaining meaning or how do we extract patterns from massive data and growing data resources Originating from the SIGCHI Workshop on Ambient Intelligence for Scientific Discovery this state of the art survey is organized in three parts new paradigms in scientific discovery ambient cognition and ambient intelligence systems Many chapters share common features such as interaction vision language and biomedicine
