Distribution Requirements Planning Chapter 8:

Distribution David F. Ross, 2012-12-06 It has been said that every generation of historians seeks to rewrite what a previous generation had established as the standard interpretations of the motives and circumstances shaping the fabric of historical events. It is not that the facts of history have changed. No one will dispute that the battle of Waterloo occurred on June 18 1815 or that the allied invasion of Europe began on June 6 1944. What each new age of historians are attempting to do is to reinterpret the motives of men and the force of circumstance impacting the direction of past events based on the factual social intellectual and cultural milieu of their own generation. By examining the facts of history from a new perspective today's historians hope to reveal some new truth that will not only illuminate the course of history but also validate contemporary values and societal ideals. Although it is true that tackling the task of developing a new text on logistics and distribution channel management focuses less on schools of philosophical and social analysis and more on the calculus of managing sales campaigns, inventory replenishment and income statements, the goal of the management scientist like the historian is to merge the facts and figures of the discipline with today's organizational cultural and economic realities. Hopefully the result will be a new synthesis where a whole new perspective will break forth exposing new directions and opportunities.

Distribution Planning and Control David F. Ross, 2011-06-27 When work began on the first volume of this text in 1992 the science of distribution management was still very much a backwater of general management and academic thought. While most of the body of knowledge associated with calculating EOQs, fair shares, inventory deployment, productivity curves and other operations management techniques had long been solidly established, new thinking about distribution management had taken a definite back seat to the then dominant interest in Lean thinking, quality management and business process reengineering and their impact on manufacturing and service organizations. For the most part discussion relating to the distribution function centered on a fairly recent concept called Logistics Management. But despite talk of how logistics could be used to integrate internal and external business functions and even be considered a source of competitive advantage on its own, most of the focus remained on how companies could utilize operations management techniques to optimize the traditional day to day shipping and receiving functions in order to achieve cost containment and customer fulfillment objectives. In the end distribution management was for the most part still considered a dreary science concerned with transportation rates and cost trade offs, expediting and the tedious calculus. Today the science of distribution has become perhaps one of the most important and exciting disciplines in the management of business.

Using a total distribution framework he reviews each aspect of the distribution process and explains how to design and implement appropriate systems. His analysis is supported throughout by diagrams, checklists and case studies. Drawing upon the experiences of practicing managers in Europe, North America, Asia and Australia he concludes that although logistics problems are the same the world over differences in language, culture and management style have a substantial impact on the solutions developed.

Managing Global Operations Scott T. Young, Winter, 1996-08-13 Since the operations manager of today is faced with global scenarios people and cultural skills have become more critical for success than analytical tools in a global 21st century. The main themes in production and operations management are operations strategy, productivity and quality. These themes are manipulated to serve those involved in production and operations management including employees, customers and owners. Experienced operations managers recognize that they accomplish their goals through people and that the skills in dealing with people are often neglected. This operations book focuses on a new type of human centered production management designed to broaden the operations managers thinking in the human interactions area and to expand problem solving processes geographically from domestic to global. This work should be of interest to CEOs and corporate and departmental executives who deal with operations and production. Individuals in academic areas dealing with management, operations management, international business and organizational behavior should also find this book of interest.
