And Infrastructure Internet Governance Information Technology:

The Turn to Infrastructure in Internet Governance Francesca Musiani, Derrick L. Cogburn, Laura DeNardis, Nanette S. Levinson, 2016-03-02 This edited volume brings together experts from around the world to provide coverage and analysis of infrastructure's role in Internet governance both now and in the future. Never in history have conflicts over Internet governance attracted such widespread attention. High profile controversies include the disclosures about NSA surveillance by intelligence analyst Edward Snowden, controversy over a decision by the US government to relinquish its historic oversight of Internet names and numbers, and countless cybersecurity breaches involving unauthorized access to Internet users' personal data. Much of the Internet governance ecosystem, both technical architecture and coordinating institutions, is behind the scenes but increasingly carries significant public interest implications. An area once concealed in institutional and technological complexity is now rightly bracketed among other shared global issues such as environmental protection and human rights that have considerable global implications but are simply incongruous with national borders. This transformation into an era of global governance by Internet infrastructure presents a moment of opportunity for scholars to bring these politicized infrastructures to the foreground.

The Public Core of the Internet Dennis Broeders, 2025-10-01 The growth and health of our digital economies and societies depend on the core protocols and infrastructure of the Internet. This technical and logical substructure of our digital existence is now in need of protection against unwarranted interference in order to sustain the growth and the integrity of the global Internet. The Internet's key protocols and infrastructure can be considered a global public good that provides benefits to everyone in the world. Countering the growing state interference with this public core of the Internet requires a new international agenda for Internet governance that departs from the notion of a global public good. Core ingredients of this strategy are: To establish and disseminate an international norm stipulating that the Internet's public core, its main protocols and infrastructure, should be considered a neutral zone safeguarded against unwarranted intervention by governments. To advocate efforts to clearly differentiate at the national and international level between Internet security, security of the Internet infrastructure, and national security, security through the Internet. To broaden the arena for cyber diplomacy to include new coalitions of states, including the so-called swing states, and private companies, including the large Internet companies as well as Internet intermediaries such as Internet Service Providers.

Protocol Politics Laura Denardis, 2009-07-31 What are the global implications of the looming shortage of Internet addresses and the slow deployment of the new IPv6 protocol designed to solve this problem The Internet has reached a critical point The world is running out of Internet addresses There is a finite supply of approximately 4.3 billion Internet Protocol IP addresses the unique binary numbers required for every exchange of information over the Internet within the Internet's prevailing technical architecture IPv4 In the 1990s the Internet standards community selected a new protocol IPv6 that would expand the number of Internet addresses exponentially to 340 undecillion addresses Despite a decade of predictions about imminent global conversion IPv6 adoption has barely begun Protocol Politics examines what's at stake politically economically and technically in the selection and adoption of a new Internet protocol Laura DeNardis's key insight is that protocols are political IPv6 intersects with provocative topics including Internet civil liberties US military objectives globalization institutional power struggles and the promise of global democratic freedoms DeNardis offers recommendations for Internet standards governance based not only on technical concerns but on principles of openness and transparency and examines the global implications of looming Internet address scarcity versus the slow deployment of the new protocol designed to solve this problem
